CANSIM/SIS - A New Phase of Development

Statistics Canada Statistique Canada

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The date in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
c	correction
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

Section 1. Selected Economic Indicators – Analytical Summary

Charts 8-13
Analytical Summary 14-17

Section 2. Population Statistics

1. Population, by Province 18
2. Immigration to Canada, by Country of Last Permanent Residence 18
3. Immigration to Canada, by Province of (Intended) Destination 18
4. Immigration to Canada, by (Intended) Occupational Group 18
5. Births, by Province 19
6. Deaths, by Province 19
7. Marriages, by Province 19

Section 3. System of National Accounts

1. Income and Expenditure Accounts

1.1. National Income and Gross National Product 20
1.2. Gross National ~~Expenditure, Current Dollars~~ 20
1.3. Gross National Expenditure, Constant Dollars 21
1.4. Sources of Personal Income 21
1.5. Disposition of Personal Income 22
1.6. Sources and Disposition of Gross Saving 22
1.7. Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government 23
1.8. Implicit Price Indexes 27
1.9. Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost 27

2. Domestic Product by Industry

2.1. Real Domestic Product by Industry of Origin, Quarterly 28
2.2. Real Domestic Product by Industry of Origin, Monthly 29
2.3. Industrial Production 31

3. Financial Accounts

3.1. Financial Flows 36

4. Balance of International Payments

4.1. Canadian Balance of International Payments, Current Account, All Countries 38
4.2. Canadian Balance of International Payments, Current Account, Country Distribution 38
4.3. Canadian Balance of International Payments, Capital Accounts, All Countries 39

Section 4. Labour

1. Wages and Salaries, by Province 40
2. Wages and Salaries, by Industry 41
3. Labour Force Characteristics 42
4. Selected Labour Force Series by Sex and Main Age Group
  4.1 Employed 43
  4.2 Unemployed 43
  4.3 Participation Rates 44
  4.4 Unemployment Rates 44
5. Labour Force Regional Data
  5.1 Labour Force 45
  5.2 Employed 45
  5.3 Employed in Non-agriculture 46
  5.4 Unemployed 46
  5.5 Participation Rates 47
  5.6 Unemployment Rates 47

Section 4. Labour – Concluded

6. Unemployment Insurance Statistics 48
7. Time Lost in Work Stoppages 49
8. Employment Indexes, by Industrial Division 50
9. Employment Indexes, by Province 51
10. Employment Indexes, by Manufacturing Industry 52
11. Average Weekly Wages and Salaries, by Industrial Division 52
12. Average Weekly Wages and Salaries, by Manufacturing Industry 53
13. Average Weekly Wages and Salaries, by Province 53
14. Average Hourly Earnings 54
15. Average Weekly Hours 55

Section 5. Prices

1. Industry Selling Price Indexes 56
2. General Wholesale Price Index 59
3. Other Price Indexes 59
4. Consumer Price Index 60

Section 6. Manufacturing

1. Total Inventories, Shipments, Orders 61
2. Manufacturing Shipments, Selected Industries 62
3. Manufacturing Inventories, Selected Industries 64
4. Manufacturing Shipments and Unfilled Orders by Economic Use Classification 66
5. Manufacturing Industries, Owned and Raw Materials by Economic Use Classification 67
6. Manufacturing Goods in Process and Finished Products by Economic Use Classification 68
7. Tobacco and Beverages 69
8. Rubber 69
9. Rubber Products 70
10. Raw Hides, Skins, Finished Leather 70
11. Footwear Production 71
12. Primary Textiles 71
13. Production of Sawn Lumber 72
14. Pulpwood, Wood Pulp and Newsprint 72
15. Primary Iron and Steel 73
16. New Motor Vehicles 74
17. Refrigerators, Freezers, Washing Machines and Clothes Dryers 75
18. Radio and Television Sets 75

Section 7. Fuel, Power, Mining

1. Electric Power 76
2. Electric Power Available, by Province 76
3. Coal and Coke 77
4. Crude Oil and Natural Gas 77
5. Petroleum Products 78
6. Metals 79
7. Non-metallic Minerals 80

Section 8. Construction

1. Building Permits, by Type 81
2. Building Permits, by Province 81
3. Dwelling Units Started, All Areas 82
4. Dwelling Units Completed, All Areas 82
5. Dwelling Units Under Construction, All Areas 82
6. Dwelling Units Started, Centres 10,000 and Over 83
7. Dwelling Units Completed, Centres 10,000 and Over 83
8. Dwelling Units Under Construction, Centres 10,000 and Over 84
9. Mortgage Loans, Approvals 84
10. Domestic Shipments of Building Materials by Canadian Manufacturers 85

TABLE OF CONTENTS – Concluded

11. Government Expenditures 113

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Labour Force Survey and Consumer Price Indexes

The 1975 release dates for two of Statistics Canada's key series are printed here as a convenient reference.

Data for the month of	Labour Force Survey	Consumer Price Index	
		Canada	Cities
December 1974	January 14	January 15	January 21
January 1975	February 11	February 7	February 18
February	March 11	March 12	March 21
March	April 8	April 11	April 22
April	May 13	May 9	May 20
May	June 10	June 11	June 18
June	July 15	July 11	July 21
July	August 12	August 8	August 19
August	September 9	September 10	September 18
September	October 14	October 9	October 21
October	November 12	November 7	November 19
November	December 9	December 11	December 22
December	January 13, 1976	January 15, 1976	January 22, 1976

The Labour Force Survey information is available from *The Labour Force,* Catalogue 71-001. Consumer price indexes for Canada are available in *Consumer Price Movements,* Catalogue 62-001. Cities indexes are released in the Statistics Canada *Daily,* Catalogue 11-001.

All these publications may be ordered from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (613-995-6809).

This is Volume 50, Number 1

Many changes have occured during our 49 years of publication. Throughout our 50th year, we will present highlights of the history of the *Canadian Statistical Review.*

CANSIM/SIS – A NEW PHASE OF DEVELOPMENT

P.N. Triandafillou*

Since its beginning in 1966, CANSIM[1] (The Canadian Socio-Economic Information Management System) has been developing new ways to serve its users. Now, in addition to the data base and supporting software comprising CANSIM, work is progressing to develop and deliver Statistical Intelligence Service (SIS). SIS is an ongoing long-term project, which, in combination with CANSIM, will yield an integrated data information system containing timely, credible (in an accounting sense) and useful information.

The heart of such an information system is naturally a data base. A data base system consists principally of three parts – sorting, indexing and storing – that emphasize a single function, that is, the efficient management of data files. A data file refers to a set of statistical observations transformed into machine-readable form. CANSIM is the name of the Statistics Canada computerized data bank and its supporting software. It is a data bank since it has a common area of data storage, a common way of storing data, a common way of retrieving data and a common way of manipulating data. This bank was designed to be efficient and economical from 20,000 to 1.5 million series, and the base now has 60,000 series. Historical data are included from 1946 whenever possible.

Before describing future plans for CANSIM/SIS, here is a brief history describing its evolutionary steps.

In late 1966, the then Dominion Bureau of Statistics accepted the responsibility for storing and updating time series data in a computerized base. Information was stored and maintained by the Databank program (a sequential file system). Since a single magnetic tape was used, the Databank program restricted the number of series that could be handled efficiently to about 10,000. Once there were more than 10,000, it was inefficient and expensive to use because of the charges involved in accessing this tape. That program allowed for the addition, deletion and editing of time series.

Beginning early in 1967, one can distinguish three phases in CANSIM development. The first stage provided for storage and maintenance of the entire data base in direct access memory. This feature permits data and/or information to be stored sequentially or randomly and enables retrieval without sequential searching through a file. It constitutes perhaps the most crucial design element of CANSIM. The first stage also provided information and carried out housekeeping tasks required for the operation and administration of a service to users. So, in July 1969, when services were first offered, the data entry and housekeeping systems were operational, together with an interim, very limited retrieval capability which produced rough tables and created data tapes (these simulated the Databank tapes) to serve as inputs to existing manipulative packages. The system was then resident in-house at Statistics Canada on an IBM 360/65 with the data stored off-line on 2314 disk packs (the disks were mounted each night to enter or retrieve series for housekeeping runs, etc.) operating in overnight batch. Only Statistics Canada could access the data base.

The second phase occurred between May 1972 and November 1973, when CANSIM was available on-line from 8.00 a.m. to 5.00 p.m. daily at the federal government Computer Services Bureau (CSB). When CANSIM was located at CSB, federal government users could access the data base directly, but the private sector could only access the base indirectly through the General Time Series Staff.

The following is a list of some of the features incorporated into CANSIM during this time.

(a) The entire base was encoded for additional security.

(b) The ability to "freeze" a matrix against retrieval was added. This feature allows for the entry and verification of data prior to release, for major revisions, etc.

(c) Full-scale retrieval capability was introduced. The retrieval program retrieves data for manipulation on a random access device or on tape. Available options offer control of the series and number of observations retrieved, choice of a variety of formats, and optional use of two identification systems (CANSIM and Databank). A rename option allows one to replace the Databank number carried on some outputs by any eight-character name provided.

(d) Manipulative programs were put on-line. The manipulative capability was provided by four program packages – Massager, MATOP, Fantom and the X-11 Seasonal Adjustment program.

(e) The CANSIM NEWS FLASH became available to terminal users. It is a text file stored on-line which provides daily information on the status of series. It can be retrieved for any period up to a month.

(f) An Inquiries List was added. This provides the name and telephone number of officers to whom inquiries may be directed concerning concepts, methods, etc.

(g) Two directories were produced. (1) *The Summary Reference Index*, is a catalogue summarizing the data bank contents by subject and by source publication. It gives the matrix (or table) number and is the key to the (2) *CANSIM Series Directory*, a list of all series stored in the data base.

The incorporation of these features into CANSIM greatly expanded the services available to users. However, the sophistication of data users accelerated, and with it, demand for fast access to both data and manipulative software. These demands have been increasingly satisfied by commercial services bureaus which offer time-sharing services in conjunction with data retrieved from CANSIM in the form of the Canadian Statistical Review Public Tape, still commonly referred to as the "standard tape". This tape is available once a month at a reduced rate, although service bureaus or anyone else could have ordered it daily at the normal rate. In many users' minds, this tape became synonymous with CANSIM. CANSIM includes much more data than this tape, and is much more timely. CANSIM is updated daily and data are normally in the system for simultaneous release with the *DAILY*:[2] if people were prepared to buy a daily standard tape, it could be created daily. Nevertheless, the Canadian Statistical Review Public Tape was used extensively, and it must be presumed either that users were unaware of the fact that CANSIM was available or that they were willing to tolerate a substantial loss in timeliness for fast easy access to data and manipulative software offered by service bureaus.

---

* Mr. Triandafillou is Director of the Current Economic Analysis Division, System of National Accounts (Current).

[1] CANSIM is a registered trade mark of Statistics Canada.

To obtain manipulative capability in an interactive, time-sharing environment for CANSIM, Statistics Canada decided to move the data base to a commercial service bureau, which would demonstrate an interactive capability and would provide terminals across the country. Another factor in the decision to move to a commercial service bureau was that CSB discontinued its service to federal government departments, and Statistics Canada policy does not allow any outside agency access to its in-house computer.

The third phase of CANSIM, now called CANSIM/SIS, is a continuing project and covers the development of integrated data with manipulative capability in the form of an interactive, time-sharing program, accessible to all. In the following sections, the present status of CANSIM/SIS is summarized and future plans are outlined.

The system is maintained at SMA *(Société de Mathématiques Appliquées Inc.)* and is accessible to all. Maintenance and retrieval runs are performed in batch mode: the data base is kept on-line. The programs have been implemented on IBM equipment operating under OS/360. Customers can use CANSIM software to produce computer printouts of information, or intermediate files with date structures suited to a number of manipulative programs that are supplied by Statistics Canada or SMA and are available at SMA.

There is also a prototype interactive retrieval operation which initiates a batch job, generating a file which can be accessed for on-line APL processing or terminal output of tables.

Potential customers have three choices in accessing CANSIM/SIS or parts of CANSIM/SIS. They may become customers of SMA (the only service bureau, at the moment, that has the whole base updated daily by Statistics Canada); or they may become customers of any of a number of the other service bureaus that have data from CANSIM; or they may continue to obtain service through Statistics Canada. Statistics Canada has no preference as to how users obtain the data except that it can monitor through SMA what series are accessed frequently, and can identify series that users require but are not now in CANSIM.

The Statistical Intelligence Service

This latest phase of CANSIM/SIS includes the development of "statistical intelligence" linked to time series and cross-sectional data to enhance the usefulness of the data and software and to provide an integrated information system. An extension of this integrated data information system will be its ability (through the intervention of the data provider) to reject data of dubious quality by the use of editing, equation banks, econometrics, etc. By information is meant (1) time series data points, cross-sectional data and associated text; and (2) tables and other report definitions with associated interpretive text. The ultimate goal for "information" might be that CANSIM/SIS would become the central data bank encompassing the total output of Statistics Canada and other data sources. The analysis and interpretive support of newly-available statistics will be an integral part of the system. An interactive environment will be instituted in which CANSIM/SIS will allow a user to engage in dialogue with the system.

When fully developed, CANSIM/SIS will provide a relatively more sophisticated analysis of current socio-economic conditions than is now available to a number of departments; create a rapid and valuable working link between Statistics Canada and the policy-making community; improve the knowledge about the interrelationships among social and economic series and events and therefore, contribute significantly to improvements in data collection, the use of projectors and the evaluation of benchmarks.

SIS initially will be available for those data (time series and cross-sectional) in most frequent use and essential for current policy making. One example of SIS is the "concepts and methods" text files that are being developed. These files, which will become part of CANSIM/SIS, will contain summary information on various series or blocks of series (and cross-sectional data) outlining definitions of components, methods of collection, discontinuities, etc.

Another major project is the addition to the system of analytical text for data being released from CANSIM. Such text will be related current intelligence. For example, a user retrieving the latest Consumer Price Index, will be able also to retrieve accompanying text pointing out significant changes in the total and component indexes, reasons for these movements and related information on the Canadian economy. In other words, SIS will provide a context for retrieved statistics, making them immediately comprehensible, promoting meaningful understanding and apt use of the information. Needless to say, the approximately 6,000 series that will be supported by SIS will have top priority for updates and releases. A separate directory will also be available for data to which SIS applies. The SIS can be extended to other statistics, depending on the need and on the availability of bureau resources.

---

[2] The *DAILY* is a Statistics Canada report produced each day listing the statistics released by the bureau that day and giving highlights of some series.

Statistics Canada plans to extend the data base to include information emanating from provincial government departments. Series and cross-sectional data will be classified either "general interest" or private. (A CANSIM/SIS Advisory Board will define "general interest".) Statistics Canada will pay for all storage and maintenance costs for general interest series, and a separate series directory will be available for these series.

The provider will have to pay storage and maintenance costs, etc. for the "private" statistics. These data will be excluded from the series directory and users will not be able to access them without the permission of the owner.

There are other features being developed; for example, it is planned that customers with terminal access to CANSIM/SIS will be able to retrieve the Statistics Canada *DAILY*. This will cut the delivery time of the *DAILY* information from up to five days by mail to about an hour by terminal.

Another feature of CANSIM/SIS will be the ability of the system to offer "packages" of information. For example, a user wishing to study the Canadian labour market could retrieve a package with such data as Labour Force, Employment, Earning and Hours, Job Vacancies, Unemployment Insurance Commission Activities, etc., together with related concepts, methods and analytical text.

Similar packages could be available for other sectors of the Canadian economy, or, provincial information could be grouped in various ways to produce data and text relevant to provinces and regions.

The CANSIM/SIS system will also have many useful features for the divisions within Statistics Canada.

First of all, CANSIM/SIS provides all divisions with a facility for internal research and development work. With the data "frozen" (not able to be retrieved) on base, a division can perform experimental manipulations of their statistics – for example, trying a new method of calculating an index.

Another feature of CANSIM/SIS is CAIS (CANSIM Alphatext Interface System). With CAIS, divisions can automate the production of regularly occurring publications using the CANSIM data base. The text portion of a publication, entered and maintained on CANSIM using ATS terminals, is kept on computer tape files. The numerical data are retrieved on tape from the CANSIM base and may also be manipulated. Then, the text and data files are matched and a final magnetic tape is created which goes to a computerized text editing and photocomposition firm for processing. The output is photo-ready copy from which the publication can be printed. The saving in time and resources is substantial. Because the need to rekeyboard data or text is minimized, the possibilities of error are also reduced.

A third feature which makes CANSIM/SIS useful for divisions of Statistics Canada is its manipulative capability. CANSIM/SIS offers the data and the manipulative software, in one facility, and therefore, subject-matter analysts no longer need to gather and enter data, then apply a special program.

To make it easier for divisions to enter and maintain their data on the base, a CANSIM Interface System (CIS) has been developed to automate data entry into CANSIM from separate computer processing systems. Automation means fewer resources are needed for each series entered and therefore, provides the basis for many more series to be put on base.

The ability of CANSIM/SIS to provide these features, and to expand to become an integrated data information system will require a comprehensive, continuing review and analysis of statistics emanating from a large number of sources. To produce this system will require staff with intimate knowledge of particular factors affecting any specific measure of social and economic activities and with the capability to synthesize and make continuing sense of the broad picture of economic and social developments. Finally, this total system must be accessible to interested users.

These requirements are being met as development of CANSIM/SIS continues.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1. 9.**

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 1.9: relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

year and quarter	gross national product at market prices	deduct:			add:	gross domestic product at factor cost	gross national product at market prices	deduct:			add:	gross domestic product at factor cost
		residual error of estimate	indirect taxes less subsidies	investment income received from non-residents	investment income paid to non-residents			residual error of estimate	indirect taxes less subsidies	investment income received from non-residents	investment income paid to non-residents

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

See footnotes, Table 3.

*In addition to the selected Labour Force information published here, there are approximately 2,100 Labour Force series available on CANSIM. The series provide basic labour force characteristics, by geographic area, age, sex and marital status.

Table 4: selected series by sex and main age group (thousands of persons)

[1] Persons who have applied for or are in receipt of unemployment insurance benefit at the end of the month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. **Sources: Statistical Report on the Operation of the Unemployment Insurance Act (73-001) Statistics Canada.**

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries.

[1] The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] See footnote 1 and source in Table 9. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 8. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 8 to 15 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard indústrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
						all inventory held				
				owned[3]	held but not owned	**total**	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the post. **Sources: Motor Vehicle Shipments (42-002), New motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally low the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable nge may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1]Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2]Agency loans (loans made by other lending institutions on behalf of C. M. H. C.) are included under C. M. H. C. [3]Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4]Includes new and existing commercial structures and farm property. **Source: Canadian Housing Statistics, Central Mortgage and Housing Corporation.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when th r current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to revision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Milk equivalents of cottage cheese are not included in the monthly figures but are included in the monthly averages. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Includes butter and cheese imported and in (railway) transit through June 30, 1968. [5] Exclusive of Newfoundland; includes hatching eggs. **Sources: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Poultry Products (32-009), Production of Eggs (23-003), Statistics Canada.**

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all ot stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. [2] Inclu Yukon and North West Territories. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential tgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills ng to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan panies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. rsonal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. rsonal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. e data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not sonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer dit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated parately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important e: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of anada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the erage of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery ve been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) w include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports 5-007), Statistics Canada.**

---

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional irlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total evenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air arrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centraliz data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centre however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely define
[2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Cleari Centres (61-001), Statistics Canada.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base etals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks luded in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries xcept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. ---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-eld funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March ncludes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Canadian Public Land Use in Perspective

The proceedings of a symposium on Canadian Public Land Use, held in October 1973, have recently been published by the Social Science Research Council of Canada (SSRCC). The SSRCC sponsored these meetings which brought together economists, sociologists, biologists, public administrators, business people, and representatives of various interest groups to discuss the many questions surrounding public land use – questions such as the following. What are the areas and distribution of the various types of public land in Canada? What purposes do they serve? How do they affect the environment and people within and around them? How are they managed now? How should they be managed in the future?

At the first session, entitled the "History and Development of Public Land in Canada", papers were presented on the background of federal land use policies historically, and on public land use policies and trends in various regions of Canada including the north. Two papers were presented dealing with land use in relation to Canada's native peoples.

The second session dealt with some public land problems, including those related to industrialization, urbanism, national parks and preserves. Public land use policies were also examined from the points of view of economics and behavioural science.

Three guests summed up land use policies in their own countries giving an overview of the American, British and Australian experience in this area.

At each session of the symposium, lively and relevant discussion enhanced the information flow between participants. Summaries of these discussions are reported in the proceedings.

Copies of the symposium proceedings, *Canadian Public Land Use in Perspective,* are available for $10 from the Social Science Research Council of Canada, 151 Slater Street, Ottawa, Ontario, K1P 5H3.

1974 CANSIM Reference Documents Released

The 1974 issues of the two basic CANSIM reference documents are now available. The *Summary Reference Index* and the *Series Directory* have been updated to reflect changes in the data base up to September 1974. Periodic amendments are issued for both documents to keep the publications current during the year.

There are more than 60,000 series in the CANSIM data base, each with a unique identification number. Series are grouped into matrices. The key to these matrices is the *Summary Reference Index (SRI).* The *SRI* lists the matrix numbers by subject matter areas.

The *Series Directory* provides detail of the individual series, including titles, starting dates of series, security levels, and frequencies. The Directory also gives the CANSIM identifier (that is, matrix number and series number) and the Databank identifier (a unique number for each series). Either of these identifiers is used in retrieving data from CANSIM.

Copies of the *Summary Reference Index* are available in English and French from CANSIM, Current Economic Analysis Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0Z8. There is no charge for the *SRI* or amendments.

The *Series Directory* costs $15, and currently is available in English only. Readers wishing to keep up with changes to the base during the year may request amendment service for an additional $5.00 a year. The *Series Directory* is also available from CANSIM at the above address.

1971 Census Place of Work Data

In November 1974, a Census Research memorandum was released presenting background information on place of work data collected in the 1971 Census. The paper explains how these data could be used in determining home-work flows and discusses some aspects of data reliability. Data on place of work will be available for 30 cities in Canada in the first quarter of 1975.

Background Information on the 1971 Census Place of Work Data (71-PW-2) by J.K. Simpson is available from User Inquiry Service, Census Field Statistics Canada, Ottawa, K1A 0T7 (Telephone 613-996-5254).

Consumer Finance Preliminary Estimates

The average income of families in Canada rose from $11,300 in 1972 to $12,532 in 1973 – an 11 per cent increase. The estimates were derived from the latest Survey of Consumer Finances, conducted in April 1974. Preliminary information on percentage distributions of families and unattached individuals by income group, age, sex and geographic area, and other cross-classifications is presented in a recent report of Statistics Canada, *Income Distributions by Size in Canada, Preliminary Estimates. 1973,* Catalogue 13-206.

Copies are available (for 70 cents) from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

The main report of the Consumer Finance Survey is expected to be published early in 1975.

Canadian Citizenship Statistics

In 1973, certificates of Canadian citizenship were granted to 104,697 persons. This report tells in which province these people are located, their ages, sex, marital status, country of former allegiance and other characteristics.

Copies of *Canadian Citizenship Statistics, 1973*, Catalogue 91-205, annual, are available for 70 cents each from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Life Tables, Canada and Provinces, 1970-1972

A life table summarizes the mortality rates over a given period to obtain a measure of longevity for various age groups. For example, the tables in this recent report show the average life expectancy of a Canadian ten-year-old girl to be 67.91 more years. The life expectancy for ten-year-old boys is 67.17 more years. Comparable data for males and females are available for all provinces for ages up to 105.

These life expectancies are based on mortality rates prevailing in Canada and in each province during the 1970-72 period. A very good explanation of how life tables are calculated and how they are to be used is presented in the introduction to this report.

Copies of *Life Tables, Canada and Provinces 1970–1972*, Catalogue 84-332, Occasional, are available for $1.05 each from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Education and Labour Force Activity

A study reported in *The Labour Force* examines the relationship between education and labour force activity. The data for the study was gathered from a questionnaire attached to the June 1973 Canadian Labour Force Survey.

As expected, the study found a direct relationship between level of education or training and participation rate in the Labour Force. This is very pronounced for women; that is, the more education or training a woman has, the more likely she is to be in the Labour Force.

The study did **not** find the expected inverse relationship between unemployment and level of education or training. Instead, there was a higher unemployment rate for people who had some high school education (6.2 per cent) than for those in the category "Grade 8 or less" who had an unemployment rate of 4.9 per cent. The author pointed out that a possible reason that this expected inverse relationship did not occur may be that a large number of people in the "high school" category might have been students entering the labour market in June.

The study and accompanying tables appeared in the September 1974 issue of *The Labour Force*, Catalogue 71-001. More information can be obtained from Bruce MacDonald of Labour Force Surveys Section, Statistics Canada, Room 1032, G.P. Bldg., Tunney's Pasture, Ottawa, K1A 0T6.

Other Publications of the General Time Series Staff

ublication umber — Title and Description

–003F *Revue Statistique du Canada*, mensuel.
This is the French edition of the *Canadian Statistical Review*.

Canadian Statistical Review Supplements

–004 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

1-206 *Annual Supplement to the Canadian Statistical Review*—Price $1.40 (Free to *Canadian Statistical Review* subscribers.)

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

1-505 *Canadian Statistical Review—Historical Summary 1970*, E. and F. Price $1.50 (Free to *Canadian Statistical Review* subscribers)

This publication replaces the *Historical Summary* 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review*. All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

CANSIM Manuals and other Publications*

— *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free on request.
Order by title from General Time Series Staff.

– CANSIM: *Progress Report*—Free on request.
Order by title from General Time Series Staff.

Publication number — Title and Description

CANSIM Manuals and other Publications (Cont'd)

*12–530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.40

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)

*12–531 *CANSIM: Users Manual for Data Retrieval and Manipulation* (Occasional) 1973 edition—Price $2.10

Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)

— CANSIM: *Summary Reference Index* (Annual, with periodic amendments) 1974 edition—Free on request.
This index summarizes data available from CANSIM and provides matrix identifiers.
Order by title from General Time Series Staff.

— CANSIM: *Series Directory* (Annual, with periodic amendments) 1974 edition—Price $15.00, or $20.00 with amendment service.

The CANSIM *Series Directory* contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the *Summary Reference Index* and CANSIM *Manual for Data Retrieval and Manipulation* (12-531) to order series from Stastitics Canada.
Order by title from General Time Series Staff.

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
R. H. Coats Tower,
Statistics Canada,
Ottawa, K1A 0T6.

---

mendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, tistics Canada.

The Input - Output Structure of the Canadian Economy

Statistics Canada Statistique Canada

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
- -	amount too small to be expressed
-	nil or zero.
†	advance estimates.
c	correction
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 4, Table 7 – Job Vacancy Rates

A new table presenting job vacancy rates by province had been added to this issue. These data are expected to be available from CANSIM in July 1975. At that time, CANSIM identification numbers will be added to the table.

THE INPUT-OUTPUT STRUCTURE OF THE CANADIAN ECONOMY, 1961 TO 1966*

Input-Output tables are a comprehensive set of economic statistics. Statistics Canada produces Input-Output tables on an annual basis. Tables have been completed for the period 1961 to 1966 and are presented, in aggregated form, with this article. Work is in progress on tables for the 1967-71 period: these are expected to be completed in mid-1976. The objective of the program is to complete the Input-Output tables for each year with a lag of four years from the reference period.

Input-Output tables serve a variety of purposes. In themselves, they present a coherent and comprehensive set of economic statistics, and, as such, serve as the data base for the family of "input-output" models associated with Professor Leontief of Harvard University. They are also used as reference values for revisions of the non-financial portion of the System of National Accounts.

Preliminary Input-Output tables for the year 1961, along with a descriptive text, were published in two volumes in 1969 (Statistics Canada Catalogue Numbers 15-501 and 15-502). These preliminary tables were not reconciled with the Income and Expenditure Accounts which were then under revision. The categories of final demand were highly aggregative – only net exports, re-exports, imports, value of physical change in inventories and "other final demand" were shown. Later on, "other final demand" was elaborated to show 40 categories of consumer expenditure, 39 categories of machinery and equipment, 40 categories of construction, six categories of government expenditure and six categories of government revenue. The inventory data were also broken into two categories. In total, there are 136 categories of final demand at the "worksheet" (the most detailed) level.

In 1970, work proceeded on the compilation of annual Input-Output tables for the years 1962 to 1966. To provide users with more recent Input-Output tables, the preliminary 1966 tables were made available on request in early 1973. Since then, the Input-Output tables for 1962-65 have been prepared. The preparation of Input-Output tables as a time series has necessitated revisions in the preliminary 1961 and 1966 Input-Output tables released earlier.

The annual tables for all six years use the same industry, category of final demand and commodity classifications. At the worksheet level, the entire system has been balanced with 210 industries, 136 categories of final demand and 666 commodities. In addition, there are seven primary inputs – wages and salaries, supplementary labour income, net income of unincorporated business, other operating surplus, commodity indirect taxes, other indirect taxes and subsidies.

Annual Tables

Three types of tables (matrices) are prepared for each year: (i) **Make Matrix** which shows production of goods and services by domestic industries; (ii) **Use Matrix** which presents values of inputs into industries; and (iii) **Final Demand Matrix**.

At the worksheet level of detail, many of the entries in the various matrices are confidential under the provisions of the Statistics Act. Therefore, the data in the Input-Output tables will be available at three levels of aggregation.

Designation of aggregation	Number of industries	Number of final demand categories	Number of commodities
S	16	14	45
M	43	14	100
L	175	14	500

In this article, Make Matrices, Use Matrices and Final Demand Matrices (along with the Inverse Matrices) are presented at aggregation level S.

Tables at aggregation level M, accompanied by a descriptive text, are planned for release in the summer of 1975. The text will include some discussion of concepts, as well as a full description of the commodity and industry classifications used and the relationship between the different levels of aggregation for both of them. The tables are expected to be completed in the spring of 1975 and will be made available to users on request.

Commodity and industry dimensions for aggregation level L are still under consideration. Many cells for both Use and Make Matrices are confidential at this level of detail. After determining confidentiality for each cell, only partial information would be made available.

Other custom-made aggregation of matrices, subject to the provision of confidentiality, will be made available to users. A charge will be made to cover the costs incurred in the services provided.

Input-Output Accounting Framework

The Input-Output tables for Canada contain two sets of interrelated accounts, namely the Commodity Account and the Industry Account. The Commodity Account details the supply of and demand for individual commodities (goods and non-factor services). The Industry Account contains the commodity outputs of industries and complete costs of production of industries (including profits).

---

* This article was prepared under the direction of K. Lal, Director of Statistics Canada's Input-Output Division.

The Canadian Input-Output tables differ from the traditional Leontieff inter-industry tables in that, in the Canadian tables, the inputs and outputs are presented in separate tables, and both inputs and outputs are classified by commodity. Commodities are clearly distinguished from industries, with the number of commodities exceeding the number of industries.

Chart I presents the accounting framework for Canadian Input-Output tables.

CHART I

The Accounting Framework of Canadian Input-Output Tables

	Commodities	Industries	Final Demand								Total
			PE	FCF	Inv	GGCE	XD	XR	Less M	Less GR	
Commodities		U	F				X				q
Industries	V										g
Commodity indirect taxes Other indirect taxes Subsidies Wages and salaries Supplementary labour income Net income Unincorporated business Surplus		Y	YF								Gross Domestic Product at Market Prices
Total	q′	g′	Expenditure on Gross Domestic Product at Market Prices								

Final Demand Categories and Imports

PE – Personal expenditure on goods and services
FCF – Fixed capital formation, business and government
Inv – Value of physical change in inventories
GGCE – Gross government current expenditure on goods and services
XD – Exports of domestic goods and services
XR – Re-exports of goods and services
M – Imports of goods and services
GR – Government revenue from sale of goods and services

Notation

V: is a matrix of the values of outputs
U: is a matrix of the values of intermediate inputs
q: is a vector of the values of total commodity outputs
g: is a vector of the values of total industry outputs
Y: is a matrix of the values of primary inputs of industries
F: is a matrix of the values of the following categories of final demand: PE, FCF, Inv. and GGCE
YF: is a matrix of the values of the primary inputs associated with final demand categories
X: is a matrix of the value of domestic exports and re-exports

The Commodity Account

Submatrix **V** (Make Matrix) in Chart 1 contains the **supply** of each commodity produced by each domestic industry valued at "producer's value". This is defined to be the selling value at the boundary of the producing establishment, excluding any sales or excise taxes levied after the final stage of processing.

The demand for commodities by the various class of transactors is shown in submatrices **U**, **F** and **X**. Submatrix **U** (Use Matrix) contains the demand, on current account, of each industry for each commodity for the purpose of using the commodity as an **intermediate input** in the production of other commodities. Submatrices **F** and **X** contain **demand** for each commodity by the final demand sectors: personal expenditure, fixed capital formation, value of physical change in inventories and gross government expenditure, exports and re-exports. The total imports and revenue from sales of government goods and services are additions to the production of goods and services produced by industries.

The value of commodities purchased by the using industries and final demand sectors often include for-hire transportation charges, trade margins and commodity taxes, these "margins" being in addition to the "producer's value". To put the measures of outputs and inputs of commodities on the same basis of valuation, the entries in **U**, **F** and **X** submatrices are at producer's values – and the "margins" associated with these entries (transactions) are accumulated into separate rows of these submatrices. Following international practice, imports are valued at the Canadian border, inclusive of duty paid.

The Industry Account

The total output of each industry, classified by commodity, is shown in the industry's row of submatrix **V**. The inputs into each industry are shown in the industry's column, sub-divided into intermediate inputs (shown in the **U** submatrix) and primary inputs (shown in the **Y** submatrix).

Make Matrix

Make Matrices (Tables 1 to 6) show the production of goods and non-factor services by domestic industries. The output estimates in the Input-Output tables are affected by the conventions used in the National Accounts. For example, imputations are included in these measures of output which are not reflected in the ordinary output statistics. Imputations occur in finance and insurance to ascribe a market valuation to services rendered by banks and life insurance companies, and in the real estate industry for the imputed rental value of owner-occupied dwellings. The output of wholesale and retail trade is defined as gross margin, excluding the cost of goods purchased for resale. Gratuities for meals, drinks, porter service, taxi service are treated as additions to the value of the output of the appropriate industries.

The Make Matrix also includes the output of dummy industries, described in a later section of this paper.

Use Matrix

Use Matrices (Tables 7 to 12) show the values of inputs into industries, sub-divided into intermediate inputs and primary inputs. The primary inputs consist of net indirect taxes (commodity taxes plus non-commodity taxes less subsidies), labour income, net income of unincorporated business and surplus.

The commodity taxes represented here are the federal excise taxes and excise duties, the provincial motor fuel taxes and provincial and municipal sales taxes. Custom import duties, being part of producer's value of imports, are not included here.

Other indirect taxes include property taxes plus certain government fees and licensing charges treated as indirect taxes in the National Accounts. Subsidies are treated as revenues to industries.

Since gratuities for meals, drinks, porter service and taxi service are counted in the output of the appropriate industries, they are also included in the wages and salaries of these industries. Also, the wages and salaries reported for the business sector include directors' fees and other taxable benefits. Because of redefinition of the construction industry to include own-account activities of all industries, (see the discussion under Classification Systems) the labour income – wages and salaries and supplementary labour income – of new and repair construction for all other industries is accordingly adjusted.

Final Demand Matrix

The Final Demand sector tables include 135 categories of expenditure and one category of imports. Tables 13 to 18 show final demand aggregated to 14 categories: durable consumer goods, semi-durable consumer goods, non-durable consumer goods, services, construction by business, construction by government, machinery and equipment by business, machinery and equipment by government, inventories, gross government expenditure, government receipts from sale of services, exports, re-exports, and imports.

The government receipts from sale of commodities (mostly services) are shown as negative entries, like imports. The payment by the industries and final demand categories which use government services is represented by positive entries in the relevant rows of the Use Matrix and Final Demand Matrix. The offsetting receipts by government are shown in the appropriate government receipt column as negative entries.

The Final Demand Matrix also shows primary inputs. These consist of indirect taxes, labour income and depreciation which is part of "surplus". The labour income includes wages and salaries and supplementary labour income paid by the government and personal sectors. The estimate of surplus (depreciation) relates to the government sector and non-profit institutions in the personal sector.

From **U** and Final Demand matrices, estimates of Gross Domestic Product and Expenditure on Gross Domestic Product can be calculated as shown in Table A.

Classification Systems

(a) Sectoring

The production and expenditure accounts of the System of National Accounts are divided into four sectors – business, government, personal and non-resident. The **business sector** of the Input-Output tables is sub-divided into industries which, according to the Statistics Canada Standard Industrial Classification (1960 edition), are composed of "establishments" engaged in the same or a similar kind of economic activity. For most part, the "three-digit" level of the Standard Industrial Classification is used at the worksheet level, although there is some aggregation in primary industries and service industries. The concept of establishment used in the Input-Output tables differs from the SIC definition in one important respect. The own-account new and repair construction activities of all establishments have been included in the construction industries of the Input-Output tables and not in the industries of the respective establishments.

The Input-Output accounts also create some "dummy industries". The creation of a "dummy industry" is a technique for routing a group of commodities as inputs into industries when the precise commodity content is unknown. For example, information on

TABLE A. Gross Domestic Product and Expenditure on Gross Domestic Product as Calculated from Input-Output Tables[1]

	1961	1962	1963	1964	1965	1966
	millions of dollars					
Labour income	21,009	22,468	23,932	26,034	28,878	32,629
Net income of unincorporated business	4,162	4,812	5,192	5,038	5,330	6,103
Other operating surplus	10,360	11,247	12,169	13,741	15,196	16,447
Gross Domestic Product at Factor Cost	**35,531**	**38,527**	**41,293**	**44,813**	**49,404**	**55,179**
Net indirect taxes	4,838	5,446	5,714	6,441	7,284	8,030
Gross Domestic Product at Market Prices	**40,369**	**43,973**	**47,007**	**51,254**	**56,688**	**63,209**
Personal expenditure:						
(i) Durable consumer goods	3,344	3,856	4,181	4,541	5,078	5,463
(ii) Semi-durable goods	3,689	4,001	4,128	4,406	4,673	5,048
(iii) Non-durable consumer goods	9,212	9,922	10,300	10,827	11,509	12,461

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitionérs. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes net expenditure abroad. [2] Employer and employee contributions to social insurance and government pension funds. [3] This item is the transfer portion of interest on the consumer debt. [4] This item is equal to "personal income" less the total of "current transfers to government". **For source see Table 1.9**

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification – continued

year and month	durable manufacturing															
	primary metal industries					metal fabricating (ex mach. & transportation equipment)							machinery (except electrical)	transp. equipment		
	total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, pressing & coating	wire & wire products	hardware, tool & cutlery		total	aircraft and parts	motor vehicles[1]

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, exce agriculture, fishing and trapping, domestic service and the non-civilian component of defence. Both full-time and part-time jobs are included. [2] Includes Princ Edward Island for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vancancies (71-002), Statistics Canada.**

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included.
[2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used.
[3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc.
[4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually.
[5] Includes miscellaneous manufacturing industries.
[6] Includes publishing and allied industries.
[7] Includes storage and communication industries.

Table 9: employment indexes,[1] by industrial division (1961= 100), based on the 1960 standard industrial classification

year and month	industrial composite[2]	forestry	mining, including milling	manufacturing			construction	transportation, communication and other utilities[3]	trade			finance, insurance and real estate	service[4]

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, based on 1967 expenditure patterns, are provided as a general guide to the relative importance of C. P. I. major components from May 1973 forward. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month		shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month: owned[3]	held but not owned	all inventory held: total	raw materials	goods in process	finished products	ratio of inventories owned to shipments

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term ontracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period it estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), tatistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the post. **Sources: Motor Vehicle Shipment (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William-Port Arthur to form Thunder Bay. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passag inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolita areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. Th remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when their current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to revision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. [2] Includes Yukon and North West Territories. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated paratety, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important e: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of nada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the verage of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery ave been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) ow include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports 55-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair, and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March ncludes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Figures are rounded and may not add to totals shown.

[1] For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1973-74. **Source: The Canada Gazette.**

the purchase of office supplies is available from industrial surveys but there is no information on the commodity composition of office supplies. A dummy industry "office supplies" was therefore created whose output was equated to the purchases of office supplies by all transactors and whose inputs were the appropriate values of paper, stationary supplies, etc. The Canadian Input-Output tables employ eight dummy industries and eight dummy commodities at the worksheet level.

In the final demand table, the current expenditures of the **government sector** are shown separately from the capital expenditures and all outlays for defence purposes are treated as government current expenditure. At the worksheet level, the current expenditure of establishments in the government sector have been grouped according to function: hospitals, education, defence, other municipal government, other provincial government and other federal government. The revenues of the government sector are grouped the same way. The value of the output of commodities produced and sold by general government is entered as negative government expenditure: this has the effect of adding to the supply of these commodities.

The capital expenditures of the government sector are divided into machinery and equipment, and construction.

The activities of government enterprises are included in the business sector and are classified to the appropriate Input-Output industries.

The **personal sector** includes not only households but also private non-profit institutions such as religious and welfare organizations, private clubs and labour unions.

Households are final consumers: by definition, they do not produce commodities. Where individuals and families engage in production which is to be counted as part of domestic product, the value (cash or imputed) of the output and the related estimates of inputs (including net income) are transferred to the appropriate industry in the business sector. For this portion of their activities, the individuals and families become unincorporated business entrepreneurs. This procedure also applies to persons owning their own home: a rental activity is imputed to them. However, domestic servants and baby sitters directly employed by households are included in the personal sector.

By convention, all expenditures of a household are current. However, for analytical purposes, household expenditures have been classified as durable goods, semi-durable goods, non-durable goods and services.

The **non-resident sector** shows imports and exports of goods and services. These flows do not include investment income paid to and received from non-residents respectively, as the accounts are on a domestic basis. Therefore, the exports of goods and services in the Input-Output Accounts are less than those published in the Gross National Expenditure Table of the National Income and Expenditure Accounts by the amount of investment income received from non-residents, and the imports are less by the amount of investment income paid to the non-residents.

(b) Industry and Commodity Classifications[1]

The 16 industries distinguished in aggregation S are:

1. Agriculture
2. Forestry
3. Fishing and trapping
4. Mines, quarries and oil wells
5. Manufacturing
6. Construction
7. Transportation and storage
8. Communications
9. Electric power, gas and other utilities
10. Wholesale trade
11. Retail trade
12. Finance, insurance and real estate
13. Community, business and personal services
14. Transportation margins
15. Operating, office, laboratory and cafeteria supplies
16. Travel, entertainment, promotion and advertising.

The Income and Expenditure Accounts, which are discussed below, distinguish 15 industries for the purpose of presenting Gross Domestic Product at factor cost. These industries are:

1. Agriculture
2. Forestry
3. Fishing and trapping
4. Mines, quarries and oil wells
5. Manufacturing
6. Construction
7. Transportation
8. Storage
9. Communications
10. Electric power, gas and other utilities
11. Wholesale trade
12. Retail trade
13. Finance, insurance and real estate
14. Community, business and personal services
15. Public administration and defence.

The concept and coverage of the industry classification in the Input-Output tables are the same as those used by the Income and Expenditure Accounts except for the following differences.

---

[1] A detailed discussion of industry and commodity classifications will be included in the forthcoming publication, *The Input-Output Structure of the Canadian Economy, 1961-66*, containing the Input-Output tables at aggregation level M.

In the Input-Output classification of industries, "Storage" is combined with "Transportation" partly because the Gross Domestic Product in Storage is small, and partly because statistics on Storage and Transportation are not clearly distinguishable.

The Input-Output industry "Community, business and personal services" includes only the business component of such services; private non-profit institutions such as religious and welfare institutions, private clubs and labour unions are shown in the final demand sector. The Public Administration and Defence category is also part of final demand sector.

Since the construction industry is defined on an activity basis in the Input-Output tables, own-account new and repair construction activities of all other industries have been included in the construction industry and not in the industries where these activities are conducted.

The commodities distinguished are:

1. Grains
2. Other agricultural products
3. Fishing and trapping products
4. Forestry products
5. Metallic ores and concentrates
6. Mineral fuels
7. Non-metallic minerals
8. Services incidental to mining
9. Meat, fish and dairy products
10. Fruits, vegetables, feed and miscellaneous food products
11. Beverages
12. Tobacco and tobacco products
13. Rubber, leather and plastic fabricated products
14. Textile products
15. Knitted products and clothing
16. Lumber, sawmill and other wood products
17. Furniture and fixtures
18. Paper and paper products
19. Printing and publishing
20. Primary metal products
21. Metal fabricated products
22. Machinery and equipment
23. Automobiles, trucks and other transportation equipment
24. Electrical and communications products
25. Non-metallic mineral products
26. Petroleum and coal products
27. Chemicals
28. Miscellaneous manufactured products
29. Residential construction
30. Non-residential construction
31. Repair construction
32. Transportation and storage
33. Communication services
34. Other utilities
35. Wholesale margins
36. Retail margins
37. Transportation margins
38. Imputed rent for owner occupied dwellings
39. Other finance, insurance and real estate
40. Business services
41. Personal and other miscellaneous services
42. Operating, office, laboratory and cafeteria supplies
43. Travel, entertainment, promotion and advertising
44. Non-competing imports
45. Unallocated imports and exports.

Input-Output Accounts and Income and Expenditure Accounts[2]

The Input-Output tables are an integral part of the System of National Accounts which includes, among other things, the Income and Expenditure Accounts.[3] The Income and Expenditure Accounts provide a measure of the output of the economy in two ways: (i) as the value of the "final" expenditure on goods and services by the various sectors of the economy, less total imports of goods and services, and (ii) as the income accruing to (or costs of) primary factors of production engaged in the production process plus certain non-factor costs such as depreciation and indirect taxes. The final product flows consist of personal expenditure on consumer goods and services, net government current expenditure on goods and services, gross fixed capital formation, value of physical change in inventories, exports of goods and services less imports of goods and services. The sum of these final flows equals Expenditure on Gross Domestic Product at market prices. The same total can be derived by summing the incomes accruing to the primary factors of production engaged in the production of goods and services plus certain non-factor costs. These include wages, salaries, and supplementary labour income and military pay and allowances, net income of non-farm unincorporated business, accrued net income of farm operators from farm production, profits and other investment income, inventory valuation adjustment, indirect taxes less subsidies, capital consumption allowances and miscellaneous valuation adjustments. These measures of production as derived within the Income and Expenditure Accounts can also be calculated by aggregating the primary inputs and the final demand sectors from the Input-Output tables. Chart 1 (page 5) shows that Gross Domestic Product at Market Prices is the sum of row totals of primary inputs. The Expenditure on Gross Domestic Product is the sum of column totals of the final demand sectors. It will be seen that the items of final expenditure are identical in both the Income and Expenditure and the Input-Output subsystems. On the Gross Domestic Product side, the Input-Output breakdown of primary inputs is less detailed. Chart II compares components of Gross Domestic Product as calculated from the Income and Expenditure Accounts with the corresponding items in the Input-Output format.

---

[2] The Income and Expenditure Accounts present estimates of Gross National Product and Gross Domestic Product. The difference between these two estimates is in the treatment of income payments to and from non-residents. In this section, reference is to Gross Domestic Product and Expenditure on Gross Domestic Product.

[3] For more information on the Income and Expenditure Accounts, see the forthcoming publications: *System of National Accounts, Volume 1, The Annual Estimates* (Catalogue 13-531); *Volume 2, The Quarterly Estimates* (Catalogue 13-533); and *Volume 3, A Guide to the National Income and Expenditure Accounts* (Catalogue 13-549).

CHART II

Comparison of Components of Gross Domestic Product

GROSS DOMESTIC PRODUCT	GROSS DOMESTIC PRODUCT
Income and Expenditure Accounts	**Input-Output Format**
(Consolidation Production Account. Primary expenses arising from Domestic Production)	
1. Wages, salaries, and supplementary labour income and military pay and allowances	Wages and salaries Supplementary labour income
2. Net income of non-farm unincorporated business 3. Accrued net income of farm operators from farm production	Net income unincorporated business
4. Profits and other investment income 5. Inventory valuation adjustments 6. Capital consumption allowances and miscellaneous valuation adjustments	Other operating surplus
7. Indirect taxes	Indirect taxes Other commodity indirect taxes
8. Deduct subsidies	Subsidies
*9. Residual error of estimate	
Gross Domestic Product at Market Prices	Gross Domestic Product at Market Prices

* To balance the Income with the Expenditure estimate, Gross National Product Division allocates half of the residual error of estimate to the Income side of the Account and the other half to the Expenditure side of the Account. Because "Income" must balance with "Expenditure" in the Input-Output framework, there is no residual error in the Input-Output Account.

The Input-Output tables, and the estimates of Gross Domestic Product derived from them, use somewhat different statistical sources than the Income and Expenditure Accounts. Notwithstanding the different approaches used, the estimates of Gross Domestic Product for the economy as derived from the Input-Output Accounts very closely approximate those in the Income and Expenditure Accounts. Specifically, Gross Domestic Product at Market Prices as calculated from Input-Output Accounts rose by 56.6 per cent between 1961 and 1966 compared with the Income and Expenditure Accounts estimate which showed that GDP rose by 56.0 per cent. The greatest difference in the year-to-year percentage change in the Gross Domestic Product at Market Prices was only 0.7 per cent in 1962.

The differences in statistical sources and methodologies can cause differences in the industrial distribution of the two estimates of Gross Domestic Product, although differences by industry tend to cancel out in total.

Considering the primary input measures, the estimates of wages and salaries and supplementary labour income are the same in the two subsystems except that in the Input-Output Accounts, labour income for own-account new and repair construction from all industries is classified to the construction industry. Also, wages and salaries of manufacturing head offices are allocated to the industries served by those head offices.

The more notable differences in the two subsystems are in the estimation of "surplus". In the Input-Output Accounts, the data are derived from establishment-based surveys, such as the annual Census of Manufactures, and surplus is essentially calculated in the context of a balance between inputs and ouputs. In the estimate of surplus for Income and Expenditure Accounts, the data sources are surveys of companies, principally taxation statistics. The use of the different statistical reporting unit yields differences in industrial allocations.

On the expenditure side, there are some minor differences in the estimates of current government expenditure, exports and imports, inventories and personal expenditure. The differences in the estimates of current government expenditure and exports and imports are definitional. One example of a definitional difference is the treatment of research grants for defence which are treated as transfer payments in the Input-Output Accounts but as purchases of government services in the Income and Expenditure Accounts. In imports and exports, transfers of funds by trade unions and sweepstakes are treated as transfers in Input-Output Accounts and as sales/purchases of goods and services in Income and Expenditure Accounts.

The valuation of physical change of inventories presents difficulty in both the Input-Output and the Income and Expenditure Accounts. There is a lack of data on the valuation practices as well as the commodity content of inventories. The two subsystems use different techniques for measuring value of physical change of inventories (VPC). For example, in the Income and Expenditure subsystem, value of change of inventories in 1966 is equal to closing inventories in 1966 less closing inventories in 1965. In the Input-Output subsystem, VPC of inventories equals closing inventories in 1966 less opening inventories in 1966. The closing inventories of 1965 differ from the opening inventories of 1966 because of classification changes, changes in the basis of valuation, and births and deaths of establishments.

Notwithstanding these methodological differences, the two subsystems for the six years 1961 to 1966 differ in the **total accumulation** of value of physical change (not stocks) by only about 5 per cent.

Consumer expenditure estimates in the Input-Output Accounts are principally derived through commodity balances; whereas, in the Income and Expenditure Accounts, such estimates are made on the basis of retail trade surveys, surveys of services trades and other independent sources. Even then, the greatest difference in this component was about 2 per cent in 1962.

The Income and Expenditure Accounts show as a separate entry the residual error of estimate, a measure of the statistical discrepancy between the "income side" and the "expenditure side". In the Input-Output tables, where each industry and each commodity account must balance, there can be no such discrepancy.

Impact (Inverse) Tables[4]

The coefficients in the Impact tables (19 to 24) are based on 1961-66 Input-Output tables. The impact tables presented here are of the open model type.[5] These impact tables contain the direct and indirect requirements of inputs per dollar of delivery to final demand. For example, with an increase in the final demand for automobiles, there will be a direct increase in purchases by the motor vehicle industry from industries producing steel, components, tires, etc. But the effect of the production of an automobile does not end with the purchase of steel, components, tires, etc. It begins a long chain of production since each of the products purchased will require, in turn, various inputs. Two types of inputs are therefore identified: direct inputs are those purchased by the industry under consideration; indirect inputs are those purchased by all industries in which production is required in order to supply inputs to the first industry. The Impact table captures the total impact of these effects of demand throughout the economy.

In Impact tables 19 to 24, allowance is made for the fact that part of the input requirements are met from outside the system, namely imports and government production of goods and services. As such, these tables contain the direct and indirect effect on domestic industry outputs of a dollar of final expenditure for each commodity spent on domestic goods.

Impact tables make allowance for leakage out of intermediate demand, for both imports and government production. Allowance needs to be made for the above leakages in the final expenditures (specified in terms of commodities) before using the Impact table to obtain direct and indirect effects on domestic industry output.

---

[4] The compilation of Input-Output tables and the standard inverse tables are the responsibility of the Input-Output Division of Statistics Canada. The development of analytic models based on Input-Output tables and the provision of customer services based on these models is the responsibility of the Structural Analysis Division. For information on this activity, see *A User Guide to Statistics Canada Structural Economic Models*, available from the Structural Analysis Division.

[5] The assumptions underlying the Impact tables are described in the Appendix (page 119).

For a detailed discussion of the analytical uses of Input-Output tables, readers are referred to *Input-Output Structure of the Canadian Economy, Volume I,* Catalogue 15-501, Statistics Canada.

On-going Work

Work is underway on the compilation of annual Input-Output tables for the years 1967 to 1971. A feature of these Input-Output tables will be a greatly expanded number of commodities, more than 1500, based on the new principal commodity classification: the number of industries will accord, in most cases, with the four-digit level in the 1970 Standard Industrial Classification (SIC). For historical continuity, a concordance has been prepared between the input-output commodity classification and the principal commodity classification as well as between the input-output industry classification, the 1960 SIC and the 1970 SIC.

There is also work underway to prepare constant price Input-Output tables, initially for the 1961-66 period. This will have an impact on current price results, and thus some current price results might be revised after the constant price equivalents have been analysed. Revisions, if any, to the 1961-66 data will be released with the Input-Output tables for 1967-71. It is planned to have the current price tables for the years 1967-71 completed by mid-1976, with the constant price results to follow by the end of the year.

APPENDIX

Assumptions of Impact Tables[6]

The open input-output models are based on four sets of structural relationships among the various components of the accounts. The first assumption is that the values of inputs of each industry are fixed proportions of the value of the composition of this output. This assumption is referred to as the "industry technology assumption". Thus a coefficient matrix **B** is obtained by dividing each element of intermediate matrix **U** by the corresponding total industry output.

The second assumption is that industries preserve their observed share of the market for each commodity regardless of the level of commodity production. This enables one to obtain a coefficient matrix **D** by dividing each element in the column of the production matrix **V** by the corresponding total commodity output.

The third assumption is that imports of each commodity are proportional to the total domestic use of each commodity. The diagonal matrix of import share coefficients μ is obtained by dividing total imports of each commodity by the total use (intermediate use plus final use) of that commodity. Final use in this context equals all categories in final demand excluding imports, exports, re-exports, government revenue and withdrawals from inventories.

The fourth assumption is that government production of each commodity is proportional to the total disappearance of the same commodity. The inputs required to satisfy this production are part of the exogenous government expenditures and hence are not related to the level of production in the model. The diagonal matrix of government production share coefficients α is obtained by dividing total government production of each commodity by the total use (intermediate use plus final use) of that commodity. Final use in this case refers to all categories of final demand excluding imports, government revenue and withdrawals from inventories.

The precise mathematical formulation defining "Inverse" used in this article is $(I-D(I-\mu-\alpha)B)^{-1}D$. **I** is the identity matrix. Other terms have been defined above.

---

[6] This Appendix refers to Tables 19 to 24.

r — Title and Description

F *Revue Statistique du Canada*, mensuel.
This is the French edition of the *Canadian Statistical Review*.

Canadian Statistical Review Supplements

Weekly Supplement to the Canadian Statistical Review—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

0 *Annual Supplement to the Canadian Statistical Review*—Price $1.40 (Free to *Canadian Statistical Review* subscribers.)

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

0 *Canadian Statistical Review—Historical Summary 1970*, E. and F. Price $1.50 (Free to *Canadian Statistical Review* subscribers)

This publication replaces the *Historical Summary* 1963 (catalogue no. 11–502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11–003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review*. All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

CANSIM Manuals and other Publications*

— *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free on request.
Order by title from General Time Series Staff.

— CANSIM: *Progress Report*—Free on request.
Order by title from General Time Series Staff.

Publication number — Title and Description

CANSIM Manuals and other Publications (Cont'd)

*12–530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.40

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)

*12–531 *CANSIM: Users Manual for Data Retrieval and Manipulation* (Occasional) 1973 edition—Price $2.10

Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)

— CANSIM: *Summary Reference Index* (Annual, with periodic amendments) 1974 edition—Free on request.

This index summarizes data available from CANSIM and provides matrix identifiers.
Order by title from General Time Series Staff.

— CANSIM: *Series Directory* (Annual, with periodic amendments) 1974 edition—Price $15.00, or $20.00 with amendment service.
The CANSIM *Series Directory* contains matrix and series titles and description detail for series available from CANSIM. It is used in conjunction with the *Summary Reference Index* and CANSIM *Manual for Data Retrieval and Manipulation* (12–531) to order series from Statistics Canada.
Order by title from General Time Series Staff.

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
R. H. Coats Tower,
Statistics Canada,
Ottawa, K1A 0T6.

---

nents to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Canada.

Statistics Canada Statistique Canada

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movement and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
c	correction
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 5, Table 4: Consumer Price Index

Separate Consumer Price Indexes for Saskatoon and Regina, and Edmonton and Calgary now replace the combined cities indexes for Saskatoon-Regina and Edmonton-Calgary. Individual indexes are available back to April 1973 from CANSIM or from the Prices Division. More information on these series may be obtained from the Prices Division and/or *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 3, No. 5.

Financial Flows

Readers are asked to note the following changes in *Financial Flows Accounts.*

The **Persons Sector** and the **Unincorporated Business Sector** have been consolidated to maintain consistency with the National Income and Expenditure Accounts.

Sector VI. 2, **Other Lending Institutions**, had two components removed – "Mortgage Investment Trust Corporations" and "Sales Finance and Consumer Loan Companies" so that this Sector now consists almost entirely of deposit-accepting institutions. Therefore, Sector VI. 2 was renamed **Near Banks.** Historical data have been revised to reflect these changes.

More detail on these changes is available in the *Financial Flows Accounts* publications (Catalogue 13-002) for the second and third quarters of 1974.

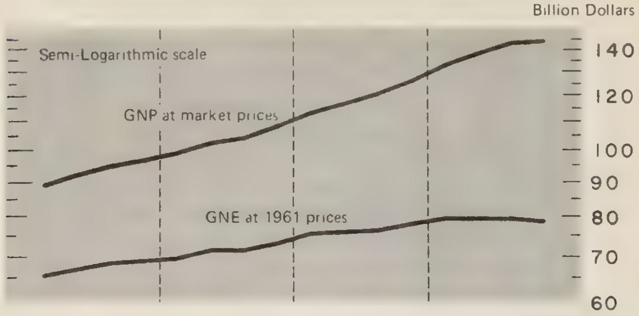
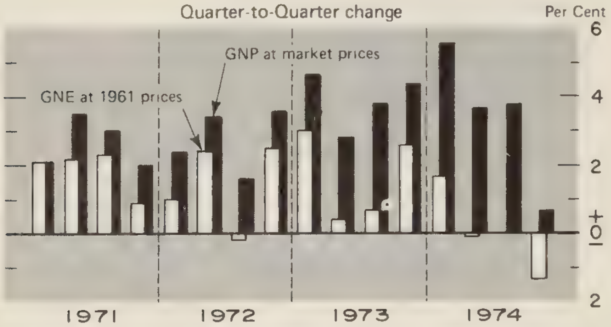
Canada's GNP in 1974 was $139.5 billion, 17.3 per cent higher than in 1973. The economy's growth in real terms was only 3.7 per cent, after real growth rates of 6.8 per cent in 1973 and 5.8 per cent in 1972.

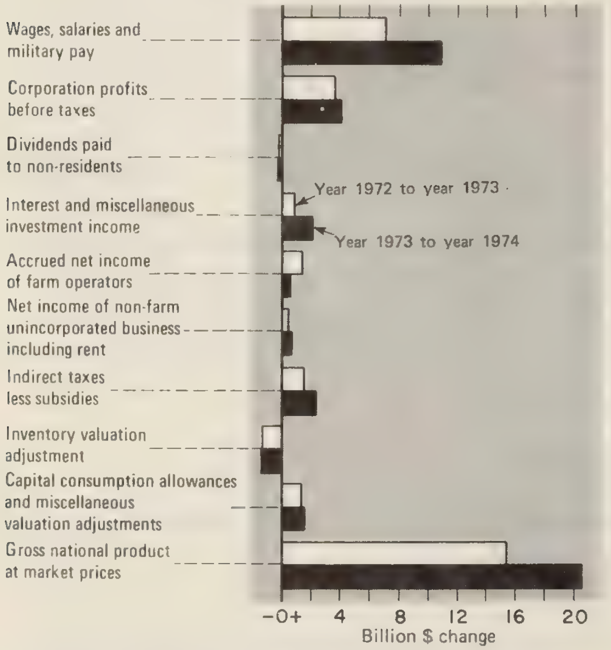


Production in the fourth quarter in real terms dropped by 1.3 per cent, the first quarterly decline of such magnitude since the recession of 1960-61.

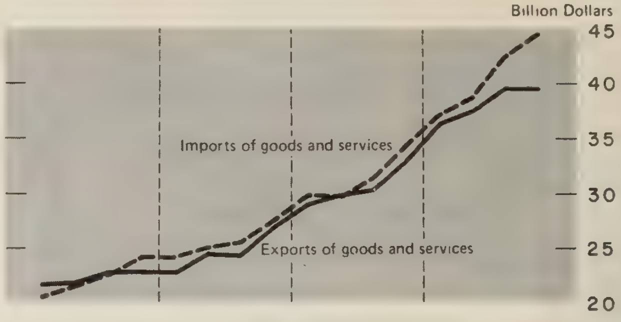


Highlighting the income side was an increase in labour income of 16.8 per cent, the largest annual rate of growth since 1951. The increase of 28.4 per cent in corporation profits, although down from 1973, was still substantial.

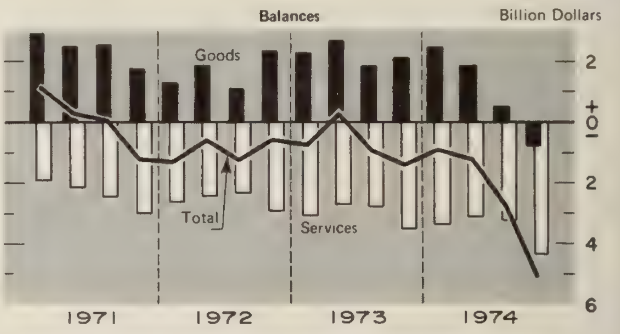
Annual changes in GNP and components



The trade deficit stood at $2,485 million in 1974, up from $785 million in 1973. The deterioration was mainly attributable to the balance of goods, which fell from a surplus of $2,231 million to $1,020 million.

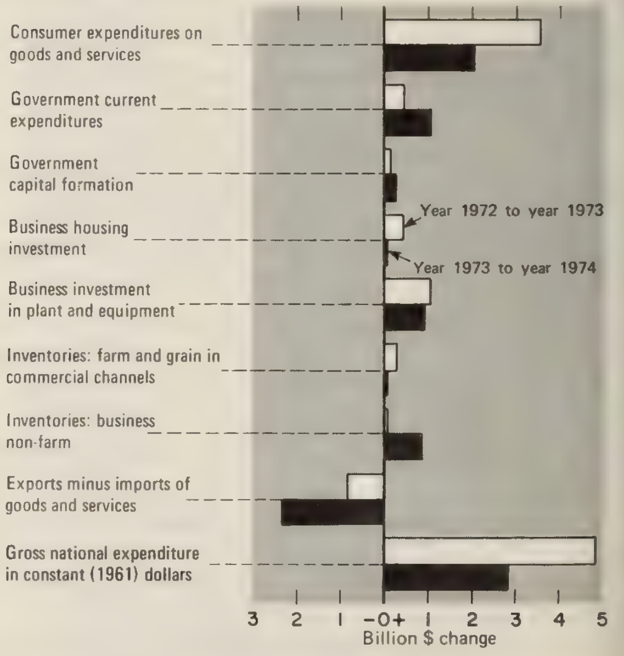


On the fourth quarter, exports of goods and services declined marginally while imports rose 5.4 per cent so that the trade deficit increased to $5,116 million.



In real terms, the weakness in the external sector of the economy offset much of the strength in the domestic sector. Final domestic demand increased by 5.7 per cent in 1974, a deceleration from the 1973 growth rate of 7.9 per cent.

Annual changes in GNE and components in constant (1961) dollars



All quarterly data adjusted for seasonal variation and at annual rates.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS

Fourth Quarter and Annual 1974 – Preliminary Estimates

Introductory Review

Canada's fourth quarter Gross National Product, seasonally adjusted at annual rates, was $144 billion, a modest increase of 0.7 per cent over the third quarter of 1974. After discounting for higher prices, production in real terms dropped by 1.3 per cent, the first quarterly decline of such magnitude since the recession of 1960-61. The quarterly changes in economic activity throughout the year, culminating in negative growth in the fourth quarter, displayed a pattern of weakness resembling that experienced in the United States about one year earlier. After a strong first quarter, and no growth in the second and third, the Canadian economy was operating in the fourth quarter of 1974 at about the same level as in the fourth quarter of 1973. For the year as a whole, the economy grew by 3.7 per cent in real terms, a marked deceleration from the growth rates of the previous three years.

Features of the fourth quarter were a slower rate of growth in labour income, the first decline in corporation profits in four years, a record trade deficit and noticeable slowdown in the growth of consumer expenditure.

The only major component of total real Gross National Expenditure showing any strength in the fourth quarter was investment in business plant and equipment. Non-residential construction grew by 4.8 per cent, and investment in machinery and equipment increased 1.1 per cent. Real consumer spending was down 1.9 per cent, led by spending on durables which fell off by 10.2 per cent in the fourth quarter after a 2.1 per cent decline in the third. Expenditures on residential construction were down 10.4 per cent for the second consecutive quarter. Real exports were 3.7 per cent lower than in the third quarter while imports showed virtually no change.

Price pressure moderated substantially in the fourth quarter. The increase in the implicit price index for Gross National Expenditure decelerated from an average rate of about 3.8 per cent in the first three quarters of the year to a rate of 2.0 per cent in the fourth. On a final domestic demand basis,[1] prices rose by 3.3 per cent in the fourth quarter compared with 3.7 per cent in the third quarter.

Consumer Outlays

Personal expenditure on consumer goods and services rose to $82.8 billion, increasing 1.7 per cent over the third quarter. A marginal decline in spending on goods was offset by a 4.9 per cent increase in expenditures on services. The implicit price index for personal expenditure on consumer goods and services continued to increase at an accelerating rate, unlike the indexes for all other major components of final domestic demand which showed varying degrees of deceleration. Price increases cancelled out the current dollar growth, resulting in a decline in real consumer spending of 1.9 per cent.

The gradual deterioration throughout the year in real consumer spending on goods was principally caused by movements in outlays on durable goods. Lower spending coupled with accelerating prices resulted in the 10.2 per cent decline in volume mentioned earlier. The weakest component of the durables category in the fourth quarter was new and used cars, about 20 per cent lower in real terms than in the previous quarter.

Spending on the semi-durables category of consumer goods also declined in real terms, by 5.1 per cent. Decreases were widely spread among clothing, footwear and household furnishings. Prices, although the rate of increase was decelerating, were still increasing at a rate of 1.7 per cent.

Real consumer expenditure on non-durable goods grew by 0.8 per cent, a deceleration from the 1.2 per cent increase of the third quarter. Spending on the two largest components, food and alcoholic beverages, both increased during the quarter, with sales of alcoholic beverages increasing at an accelerating rate. While some non-durable prices showed smaller increases, food and tobacco prices rose at a faster rate.

The overall weakness in real consumer expenditure on goods was partly offset by an increase in real spending on services. The major sources of strength in services were spending on rents, household services, travel and public transportation. Increases in prices of rent, health and recreational services were mainly responsible for the 3.2 per cent increase in the implicit price index for services.

Fixed Capital Formation

Business gross fixed capital formation increasd by 2.5 per cent in the fourth quarter to $27.9 billion in current dollars. However, a price increase of 3.1 per cent resulted in a decline of 0.6 per cent in real terms. The weakness in the quarter stemmed from the housing component, as investment in business plant and equipment was up 2.6 per cent.

The decline in residential construction was evenly split between single and multiple dwellings. Housing starts, which have been on a falling trend since the second quarter of 1974, declined by a further 23 per cent in the fourth quarter so that residential construction will continue to be weak in the first quarter of 1975.

---

[1] Final domestic demand is the sum of personal expenditure on consumer goods and services, government current expenditure on goods and services, and gross fixed capital formation, and therefore provides a better measure of the price movement of purchases of final goods and services by Canadians.

Real investment in business plant and equipment rose 2.6 per cent, largely because of a 4.8 per cent increase in non-residential construction expenditures. Machinery and equipment outlays rose by only 1.1 per cent. Price increases in both categories showed some moderation from the third quarter rate.

The External Sector

Canada's external trade position continued to deteriorate in the fourth quarter. In current dollars, exports of goods and services declined marginally while imports rose 5.4 per cent so that the trade deficit increased to $5,116 million, double that of the third quarter and the largest on record. The $528 million surplus on goods traded in the third quarter swung to a $784 million deficit in the fourth. The traditional deficit on services slid from $3,244 million in the third quarter to $4,332 million in the fourth, with travel expenditures and interest and dividend payments accounting for the major share of this change.

The implicit price index for exports rose by 3.4 per cent in the fourth quarter, compared with a relatively small 2.3 per cent increase in the third. Strong increases were recorded in prices of final manufactured products (4.1 per cent), food (5.6 per cent), natural gas (20.0 per cent) and iron ore (5.0 per cent). Import prices also accelerated, increasing by 5.8 per cent in the fourth quarter, after a 4.1 per cent rise in the third. Components exhibiting the largest price increases were manufactured products (5.4 per cent), crude metals (16.0 per cent), petroleum (6.8 per cent) and food (4.7 per cent).

In real terms, exports were down 3.5 per cent, due mainly to weakened sales of a wide range of manufactured goods. Exports of crude materials were up 2.0 per cent.

Imports of goods and services were down fractionally in real terms because of a 2.8 per cent drop in goods imports. This was mainly the result of a 12.4 per cent decrease in fabricated materials imports, especially textiles, chemicals and metal products, and a 0.4 per cent decline in imports of manufactured products (the latter comprises about 70 per cent of real imports). Food imports were also down 3.7 per cent, while imports of crude materials increased 0.8 per cent.

Inventory Investment

For the fourth consecutive quarter, investment in business non-farm inventories was strong, reaching a level of $2,980 million, part of which appears to have been involuntary. Manufacturing industries and wholesale and retail trade all registered further accumulation; the build-up in manufacturing represented about 70 per cent of the total. This accumulation was equally distributed between durable and non-durable goods-producing industries. By stage of production, inventories of finished goods and goods in process increased sharply, and those of raw materials showed a moderate increase.

Stocks-to-sales ratios for all three major industry groups were somewhat higher than those in the previous quarter.

Incomes

In the fourth quarter of 1974, labour income advanced by 3.0 per cent after a 5.0 per cent gain in the third quarter. The increase in the fourth quarter was largely attributable to gains in average earnings as there was little change in employment.

Wages and salaries in both the goods-producing and service-producing industries showed declines in their rates of growth. Most of the deceleration in the wages and salaries of the goods-producing industries was concentrated in manufacturing where employment declined and the rate of increase in average earnings lessened. Wages and salaries in the service-producing industries included cost-of-living allowances similar to those included in the third quarter.

Corporation profits decreased by 7.9 per cent in the fourth quarter, the first decrease since the end of 1970. Within manufacturing, profits in the chemicals industries continued to increase rapidly while the rubber, textiles, wood, paper, primary metals and transportation equipment industries all experienced substantial decreases. In the non-manufacturing group, utilities' profits increased strongly while retail trade profits declined significantly.

Accrued net income of farm operators from farm production increased by 9.8 per cent in the fourth quarter of 1974. The rise was mainly attributable to large increases in the value of grain production and higher returns from the sale of dairy products, fruits and vegetables. The value of livestock production was virtually unchanged.

Net income of non-farm unincorporated business, including rent, showed little change in the quarter. Declines in net income in the construction, retail trade and fishing industries were offset by increases in the finance, insurance and real estate and service industries.

Government Sector

Seasonally adjusted at annual rates, total expenditures of all government combined, excluding intergovernmental transfers, increased by 4.9 per cent, less sharply than in the third quarter. Spending on current goods and services rose by 2.4 per cent as provincial and local governments increased their spending, while outlays at the hospitals and federal levels declined. The largest increase took place in the subsidies. An increase of 44.6 per cent in federal subsidies resulting from higher payments to oil importers and railway companies was partly offset by a decline in provincial subsidies.

Total revenues of all levels of government combined rose by 2.7 per cent compared with 8 per cent in the third quarter. The most important increase took place in personal direct taxes which went up 4.2 per cent, a much lower rate of increase than the exceptionnally high rate of 12.9 per cent in the third quarter. Corporate direct taxes decreased by 4.3 per cent compared with a 7.3 per cent increase in the third quarter.

Because of expenditures rising more rapidly than revenues, the surplus of the government sector on a National Accounts basis decreased from $1,932 million in the third quarter to $772 million in the fourth.

Gross National Product – Annual 1974

Canada's Gross National Product in 1974 was $139.5 billion, 17.3 per cent higher than in 1973. The economy's growth in real terms was only 3.7 per cent, after real growth rates of 6.8 per cent in 1973, 5.8 per cent in 1972 and 5.6 per cent in 1971. Employment increased by an above-average 4.3 per cent in 1974, after the record-breaking increase of 5.2 per cent in 1973. Prices continued to escalate rapidly. The implicit price index for Gross National Expenditure rose by 13.1 per cent after an increase of 7.6 per cent in 1973. The 1974 increase is the largest on record, outranking that of 1951, when pressures associated with the Korean War sent the index up 11.5 per cent, and that of 1948, when prices rose by 12.2 per cent because of post-war reconversion.

Most income and expenditure components showed remarkable increases – labour income, up 16.8 per cent, corporation profits, up 28.4 per cent, interest and miscellaneous investment income, up 40.6 per cent, accrued net income of farm operators from farm production, up 18.1 per cent, consumer expenditures on goods and services, up 15.3 per cent, government current expenditure on goods and services, up 19.1 per cent, business expenditures on plant and equipment, up 23.3 per cent, exports of goods and services, up 25.5 per cent, and imports on goods and services, up 30.3 per cent. However, such increases largely reflected the current rate of inflation. A trade deficit of $2,485 million was the largest on record.

In real terms, the weakness in the external sector of the economy offset much of the strength in the domestic sector. Final domestic demand increased by 5.7 per cent in 1974, a deceleration from the 1973 growth rate of 7.9 per cent, but in line with the average rate of growth over the past 25 years.

Consumer Outlays

Current dollar consumer expenditure increased more than 15 per cent in 1974; prices grew by 10.5 per cent. The real increase of 4.3 per cent in 1974 followed increases of 8.0 per cent in 1973, 6.9 per cent in 1972 and 5.3 per cent in 1971.

Consumer spending on durables increased by 3.8 per cent in real terms, after a 16.8 per cent rate of increase in 1973. This sharp deceleration was because of a decline in sales of new passenger cars, and weakness in residential construction; sales of furniture and appliances slowed from 1973. Spending on semi-durables increased by 6.7 per cent in real terms, and the overall deceleration from 11.8 per cent in 1973 was widely distributed among the components. Sales of non-durables increased at about the same rate as in 1973; an acceleration in food sales (the largest component) was a little more than offset by deceleration in other categories. Real consumer spending on services increased 2.7 per cent in 1974.

All major components of consumer expenditure experienced sharper price rises in 1974 than in 1973, but price increases were particularly strong in durable and semi-durable goods.

Gross Fixed Capital Formation

Real gross fixed capital formation was strong in 1974, despite a sharp deceleration in the rate of investment in residential construction. Virtually all of the increase was due to expansion of business plant and equipment, which continued the vigour of 1973 following six years of relatively weak investment. A steep 13.5 per cent price increase was more than double the 1973 rate of 6.6 per cent. The year-to-year changes in the components of business capital formation, in real terms, were as follows: residential construction, up 0.8 per cent, non-residential construction, up 7.9 per cent, machinery and equipment, up 10.0 per cent. Although residential construction was only about 5 per cent of total real Gross National Expenditure in 1974, its modest increase, after 12.8 per cent growth in 1973, figured strongly in the slower growth in final domestic demand.

Inventory Investment

There was a sharp rise in non-farm business inventory investment, from $923 million in 1973 to $2,860 million in 1974. Both manufacturing and wholesale trade displayed strong increases.

The External Sector

The trade deficit stood at $2,485 million in 1974, up from $785 million in 1973. The deterioration was mainly attributable to the balance on goods, which fell from a surplus of $2,231 million to $1,020 million. The deficit on services increased from $3,016 million to $3,505 million.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documenta evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Cens of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancé and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governme business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and gove ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expen ture is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The differen between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1. 9.**

[1]These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and etween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar mparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour forc in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividin the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing sea sonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force b summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. Th estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For oth explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, ex agriculture, fishing and trapping, domestic service and the non-civilian component of defence. Both full-time and part-time jobs are included. [2] Includes Pri Edward Island for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.**

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as se laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. m January 1973 forward, the 1970 S. I. C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries lude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In ition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes lishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in t month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trappi education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes stora electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

† These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 196 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relatin to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, base on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. [5] Includes shelter an household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from Ma 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes no contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
						all inventory held				
				owned[3]	held but not owned	total	raw materials	goods in process	finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term ontracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period t estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total anufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), tatistics Canada.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term ntracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in nufacturing Industries (31-001), Statistics Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel bricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported b manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the post. **Sources: Motor Vehicle Shipmen (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and isposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and entanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), tatistics Canada.**

Table 5: statistics of refined petroleum products[1] (thousand barrels)

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, to the non-receipt of returns from a few small places. No account is taken of the building activity outside registration areas. Actual operations normally w the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable ge may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passa inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolit areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. T remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Include fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farn property. **Source: Canadian Housing Statistics, Central Mortgage and Housing Corporation.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as hanging quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of hem with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to evision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes uilding Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom ork, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. [2] Includes Yukon and North West Territories. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential nortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills wing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan ompanies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed y personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not easonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer redit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated arately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important c Farm machinery (73) now includes tractors; Driiling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of ada, Exports (65-004), Statistics Canada.**

Table 4: merchandise imports, by commodity, based on the standard commodity classification[1] (million dollarx)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the rage of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery e been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports 007), Statistics Canada.**

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 najor railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other nonths of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional lines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total enues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air rrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base etals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks ıcluded in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries :xcept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices ıd Price Indexes (62-002), Statistics Canada.**

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-ield funds, and taxes collected on behalf of and transferred to other governments. [4] Beginning in December 1973, this category includes oil export tax. [3] March ncludes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Seasonal Adjustment of Consumer Price Index Movements

The Retail Prices Section of Statistics Canada recently started publishing changes in the Consumer Price Index for Canada on a seasonally-adjusted basis. This supplementary measure of price change will be of use primarily for general economic analysis. By removing the effect of seasonal price movements that can be identified as recurring with much the same magnitude at the same time each year, such as those arising from changes in climate, holiday periods, model changeovers, etc., the analyst can more readily discern underlying and longer-term price trends. Over each 12-month period, of course, the unadjusted and the adjusted price movement will be identical. Since the movement of prices actually paid by consumers is measured by the unadjusted CPI, that series will continue to be used most extensively for the same purposes as now, for example, its use in labour contract and transfer payment adjustment.

The seasonality identified in the Consumer Price Index is mainly concentrated in about one-third of the items which comprise it – the other two-thirds exhibit very little seasonal effect. Therefore, the seasonal adjustment program is applied only to those item indexes judged, according to the guidelines[1] developed by Statistics Canada, to have enough seasonality to warrant adjustment. The seasonal adjustment program used is the X-11.[2]

After these item indexes are deseasonalized, they are recombined with the remaining unadjusted item series, using the appropriate weights. This recombination of unadjusted and adjusted item price movements yields an overall measure of consumer price change from which the major proportion of seasonality has been removed. The more direct method of adjusting the Consumer Price Index at the major aggregate level rather than at the item level yields somewhat similar results; however, the advantage of the indirect method used by Statistics Canada is that the contribution of each item to the total CPI seasonally-adjusted movement can be identified.

[1] *General Seasonal Adjustment Guidelines,* Statistics Canada's version of the monthly multiplicative and additive X-11 Variant of the Census Method II Seasonal Adjustment program, Guy Huot and Alain de Fontenay, Research and Development Unit, General Time Series, Statistics Canada, Revised in July 1973.

[2] *The X-11 Variant of the Census Method II Seasonal Adjustment Program,* Technical Paper No. 15, Bureau of the Census, Department of Commerce, Washington, February 1967.

Month-to-month Percentage Change in Seasonally Adjusted Consumer Price Index for Canada

	All items	Food	All items excluding food
1973:			
May	.7	.6	.8
June	.7	1.6	.4
July	.5	.9	.3
August	1.2	2.8	.6
September	1.0	2.0	.6
October	.5	.6	.4
November	.9	1.6	.7
December	.6	.4	.7
1974:			
January	.6	.8	.6
February	1.1	1.9	.8
March	.9	1.5	.7
April	.7	–	1.0
May	1.6	2.8	1.1
June	1.1	.8	1.3
July	.4	–	.6
August	1.0	1.2	.9
September	.9	1.4	.7
October	1.2	2.3	.7
November	1.2	1.5	1.0
December	1.1	1.6	.9
1975:			
January	.5	.1	.6

It should be noted that irregular or erratic movements are not eliminated by the seasonal adjustment process so that, even after such adjustment, care must be taken in inferring annual rates of price change from single month-to-month movements when irregular influences are present.

More detailed information on seasonal adjustment of changes in the Consumer Price Index is available in the Retail Prices and Living Costs Service Bulletin entitled *Seasonal Adjustment of the Consumer Price Index* (Catalogue 62-005, Vol. 4, No. 1.) Technical information about the seasonal adjustment of the CPI can also be obtained from Mr. Hannett of the Retail Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (613-994-5850).

Statistics Canada – SSRCC Program of 1971 Census Analytical Studies

A program of analytical studies in connection with the 1971 Census of Canada has been organized jointly by Statistics Canada and the Social Science Research Council of Canada. The objective of this program is to foster the use of 1971 Census data, acquired at substantial national cost and organized in a more accessible way than ever before, to investigate important aspects of Canadian society.

Financial support for this program is being provided by Statistics Canada. The Social Science Research Council of Canada has undertaken to solicit research proposals (mostly among university staffs) arrange for their evaluation and select the projects to be recommended for funding by Statistics Canada. The SSRCC is also making arrangements for the publication of the completed studies.

All projects are analytical studies of significant problems, and make substantial use of data from the 1971 Census of Canada. Suitability and effectiveness of research design, and the feasibility of its producing results was assessed in the selection of projects.

Several of the best proposals – possibly as many as 12, depending upon their total budgets – will be selected for recommendation to the Chief Statistician of Canada for financial support. The supported projects will eventually result in a series of publications also to be jointly sponsored by Statistics Canada and SSRCC.

The selection of studies to be recommended for support is being made by Advisory Panel appointed by the SSRCC for this purpose. Assessment of expert reviewers in the field of each proposal is being sought by the panel.

Provisions will be made for translation of studies into the second official language of Canada and for simultaneous publication in both languages. A well-identified series of publications through a recognized publishing house is planned.

Inquiries about the program may be directed to the Executive Chairman, SSRCC Advisory Panel, Statistics Canada – SSRCC 1971 Census Research Program, Dunning Hall, Queen's University, Kingston, Ontario, K7L 3N6 (613-547-3108).

Selected Statistics of the Motor Carrier Industry Now Available

The Transportation and Communications Division has completed a special study, to determine the size, importance and nature of the regulated for-hire motor carrier industry in Canada. The survey which provided information for this study was initiated and carried out with the co-operation of the Canadian Transport Commission, the Ministry of Transport, the Transportation Development Agency and the Canadian Trucking Association. The provincial regulatory agencies supplied listings of owners of licensed commercial vehicles, as a basis for the survey mailing list.

From information derived from the survey, an accurate and up-to-date register of motor carrier undertakings has been developed. It lists all establishments authorized to operate commercial motor vehicles in Canada carrying passengers, or freight, or both. Used as the basis for the universe of all Statistics Canada motor carrier surveys, it will result in more comprehensive and useful reports of the industries covered. Private trucking operations are, by definition, excluded from these surveys.

Information on the study is available from Mr. S. Mozes, Transportation and Communications Division, Statistics Canada, Ottawa, Ontario, K1A 0V5 (613-996-9276).

Historical Supplement to Inventories, Orders and Shipments

Monthly data on shipments, inventories and orders for the years 1970 to 1973 are presented in a recent report released by the Manufacturing and Primary Industries Division. This Historical Supplement (Catalogue 31-519) has tables with value data by industry grouping and provinces, and by selected individual industries.

Copies of *Inventories, Shipments and Orders in Manufacturing Industries,* are available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

International Retail Price Comparisons

Statistics Canada's International Prices Section produces indexes which relate retail prices and living costs in foreign countries to those in Ottawa. These "post indexes" were developed as a basis for paying Canadian government personnel stationed in other countries, and can be used as guidelines for other organizations with staff outside Canada. However, because of the specialized nature and purposes of these indexes, they should not be applied automatically to other uses without regard to their possible limitations.

The time, the categories of expenditures included and the problems of international price and quality comparison are all factors affecting the usefulness of these indexes for other than their original purposes. Readers interested in using the indexes can receive advice on their application from the Prices Division.

For more information on international and retail price comparisons, see the Retail Prices and Living Costs Service Bulletin, *International Retail Price Comparisons* (Catalogue 62-005, Vol. 3, No. 6) or contact Mr. C. Campbell, Chief, International Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (613-994-5850).

New Report on Canadian Families

The average size of families in Canada has been decreasing, but the number of families has increased. In 1966, the average family size was 3.9 persons: in 1973, the average size had decreased to 3.6 persons. During the same period, the number of families in Canada increased from 4,515,000 to 5,204,000. These data were taken from a recent Statistics Canada's report, *Estimates of Families in Canada.*

The report also contains information on number and age of children in families and the age of the head of families, for Canada and the regions.

Estimates of Families in Canada, 1973, Catalogue 91-204, Annual (Price: 70 cents) is available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Consumer Price Index – Relative Importance of Major Components

The Consumer Price Index, since its latest revision in May 1973, measures the percentage change through time in the cost of purchasing a "basket" of goods and services which represents the average expenditure pattern, during 1967, of a large number of middle-income Canadian urban families.

Although the basic quantities of goods and services remain unchanged in each monthly CPI survey, the aforementioned "basket" is, in effect, revalued each month in current price terms. Because retail prices do not all change at the same rate, the weights or relative importance of the CPI components likewise change from month to month, however minutely, in reflection of differentials in price movements. Those items which move more than the average grow in relative importance while those which move less than the average diminish in relative importance.

The following table shows, for each month from May 1973 to December 1974, the implicit weights of the major components of the Consumer Price Index. These weights can be compared with the 1967 quantity weights, **valued in terms of 1967 prices**, published in Appendix I of *The Consumer Price Index for Canada, Revision Based on 1967 Expenditures* (Catalogue 62-539, Occasional, 70 cents).

Consumer Price Index for Canada – Relative Importance of Major Components (Implicit Weights)

Annual average	100.0	28.0	31.7	10.0	14.2	4.2	6.4	5.5

Export prices rose by nearly 27 per cent in 1974, due to very sharp increases in the prices of wheat, petroleum and natural gas, woodpulp and newsprint, all metals, and final manufactured goods. The 19 per cent increase in import prices is accounted for by strong price rises in food, petroleum, chemicals, metals and by relatively strong increases in final manufactured products.

In real terms, exports declined 1.1 per cent. This decline was due to decreased exports of food, petroleum, lumber and auto parts, which were partially offset by increases in exports of woodpulp, newsprint, iron and steel, machinery and equipment, and motor vehicles.

Constant dollar imports were up 9.4 per cent in 1974 due to increases in all major categories of manufactured goods. There was a decline in petroleum imports.

Incomes

Labour income increased by 16.8 per cent in 1974, the largest annual rate of growth since 1951, and compared with an increase of 12.5 per cent in 1973. The acceleration resulted largely from increases in average earnings. In 1974, the estimates were particularly affected by both a record number of man-days lost due to industrial disputes and record levels of retroactive wage payments and lump sum cost-of-living allowances.

Wages and salaries in the goods-producing industries advanced by 14.1 per cent in 1974, after an increase of 12.5 per cent in 1973. Within the goods-producing industries, wages and salaries in manufacturing and construction rose by similar amounts, mainly reflecting significant increases in average earnings.

Wages and salaries in the service-producing industries rose by 17.9 per cent in 1974, compared with an increase of 12.2 per cent in 1973, in line with sharp gains in average earnings. The rate of increase accelerated notable in all industry groupings. The large retroactive payments and cost-of-living allowances in 1974 particularly affected the rates of increase in the transportation, communication and other utilities (up 18.1 per cent), service (up 17.0 per cent), and public administration (up 19.1 per cent) industries.

The annual increase of 28.4 per cent in corporation profits, although down from the 35.7 per cent increase recorded in 1973, was still substantial. Profits in mining, manufacturing and trade all showed notable increases. Within manufacturing, the sharpest increases took place in the textile, paper, primary metals, metal fabricating, machinery, chemical, and petroleum and coal industries.

The inventory valuation adjustment, intended to remove from income those profits which do not reflect current production, increased from $2,418 million in 1973 to $3,881 million in 1974.

Accured net income of farm operators from farm production rose by 18.1 per cent in 1974, a sharp drop from the extraordinarily high rate of increase in 1973. The value of grain production, as in 1973, increased sharply, reflecting a further rise in prices, and was the main contributor to the total increase. Cash receipts from the sale of dairy products, fruits, vegetables and eggs, and government subsidy payments also rose sharply. The value of livestock production decreased slightly as prices levelled off or declined. Farm operating expenses increased at about the same rate as in 1973, further dampening the increase in farm income.

The rise in interest and miscellaneous investment income of 40.6 per cent was due mainly to higher government royalties.

Government Sector

Total expenditures of all levels of government combined, excluding intergovernmental transfers, rose by 22.4 per cent in 1974. More than half of the increase took place in spending on current and capital goods and services. Current outlays on goods and services rose by 19.1 per cent spread about equally at the federal, provincial and local levels. Transfer payments to persons increased by 21.9 per cent, particularly at the federal level where higher rates led to a one billion dollar increase in family and youth allowances. Subsidies increased by 134.1 per cent, mainly at the federal level and largely reflecting the introduction of payments to importers of crude oil and petroleum products and higher payments to the railways.

Total revenues of all levels of government combined increased by 24.8 per cent. Reflecting the rise in personal income, personal direct taxes rose by 22.4 per cent. Indirect taxes rose by an amount similar to the rise in personal direct taxes. Almost half of the increase resulted from revenues collected under the oil export tax and charge. All other revenue categories registered gains. Corporate direct taxes rose by 40.3 per cent, in line with the sharp increase in corporation profits. The 28.6 per cent increase in investment income was due largely to a sharp increase in royalties.

As a result of revenues rising more sharply than expenditures, the surplus, on a National Accounts basis, of the government sector as a whole increased from $612 million in 1973 to $1,686 million in 1974.

[1] Excludes profits of government business enterprises.

[2] Includes the withholding tax applicable to this item.

[3] Includes profits (net of losses) of government business enterprises and other government investment income.

[4] Includes an arbitrary smoothing of crop production, and standard seasonal adjustment for withdrawals of grain from farm stocks and for the changes in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.

[5] Includes net income of independent professional practitioners.

[6] See footnote 4, of Table 2.

TABLE 2. Gross National Expenditure, by Quarters, 1973 and 1974

Seasonally adjusted at annual rates

	1973					1974				
	I	II	III	IV	Year	I	II	III	IV	Year
	$'000,000									
Personal expenditure on consumer goods and services	66,060	67,676	69,972	72,668	69,094	75,720	78,520	81,468	82,824	79,633
Government current expenditure on goods and services[1]	22,056	22,092	23,000	23,968	22,779	25,044	26,532	28,148	28,824	27,137

Value of physical change in inventories	988	424	1,348	1,416	1,044	1,992	3,000	3,380	2,836	2,802
Government	- 24	- 52	0	16	- 15	- 24	28	48	- 12	10
Business:										
Non-farm[4]	1,260	652	344	1,436	923	2,864	2,852	2,744	2,980	2,860
Farm and grain in commercial channels[5]	- 248	- 176	1,004	- 36	136	- 848	120	588	- 132	- 68
Exports of goods and services	29,024	29,804	30,236	32,900	30,491	36,196	37,524	39,692	39,596	38,252
Deduct: Imports of goods and services	- 29,804	- 29,776	- 31,208	- 34,316	- 31,276	- 37,084	- 38,744	- 42,408	- 44,712	- 40,737
Residual error of estimate	484	- 196	52	732	268	192	- 336	- 120	792	132
Gross National Expenditure at market prices	**112,984**	**116,136**	**120,580**	**125,908**	**118,902**	**132,936**	**137,808**	**143,108**	**144,120**	**139,493**
Detail of farm inventories and GICC:										
Value of grain crop production Depletions of farm stocks of grain	- 204	- 140	- 400	208	- 134	- 784	- 688	- 220	- 200	- 473
Change in other farm-held inventories	176	440	860	124	400	32	408	452	292	296
Grain in commercial channels	- 220	- 476	544	- 368	- 130	- 96	400	356	- 224	109

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication *National Income and Expenditure Accounts, Second Quarter, 1974,* Catalogue 13-001.

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one-fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

TABLE 3. Gross National Expenditure in Constant (1961) Dollars, by Quarters, 1973 and 1974[1]

Seasonally adjusted at annual rates

	1973					1974				
	I	II	III	IV	Year	I	II	III	IV	Year

Residual error of estimate	348	– 100	56	480	196	148	– 160	– 28	464	106
Gross National Expenditure in constant (1961) dollars	75,376	75,656	76,180	78,168	76,345	79,528	79,420	79,432	78,416	79,199

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

03F *Revue Statistique du Canada*, mensuel.
This is the French edition of the *Canadian Statistical Review*.

Canadian Statistical Review Supplements

)4 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

6 *Annual Supplement to the Canadian Statistical Review*—Price $1.40 (Free to *Canadian Statistical Review* subscribers.)

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

5 *Canadian Statistical Review—Historical Summary 1970*, E. and F. Price $1.50 (Free to *Canadian Statistical Review* subscribers)

This publication replaces the *Historical Summary* 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review*. All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

CANSIM Manuals and other Publications (Cont'd)

*12-530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.40

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)

*12-531 *CANSIM: Users Manual for Data Retrieval and Manipulation* (Occasional) 1973 edition—Price $2.10

Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)

— CANSIM: *Summary Reference Index* (Annual, with periodic amendments) 1974 edition—Free on request.

This index summarizes data available from CANSIM and provides matrix identifiers.
Order by title from General Time Series Staff.

— CANSIM: *Series Directory* (Annual, with periodic amendments) 1974 edition—Price $15.00, or $20.00 with amendment service.

The CANSIM *Series Directory* contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the *Summary Reference Index* and CANSIM *Manual for Data Retrieval and Manipulation* (12-531) to order series from Statistics Canada.
Order by title from General Time Series Staff.

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movement and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
c	correction
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 4, Table 7 – Job Vacancy Rates

Three additional tables with data from the Job Vacancy Survey have been added to this issue. These data are expected to be available from CANSIM in July 1975. At that time, CANSIM identification numbers will be added to the tables.

JOB VACANCY SURVEY*

This issue of the *Canadian Statistical Review* introduces three new tables with data selected from the Job Vacancy Survey (JVS). (See pages 49 and 50.)

The CSR tables present information on total job vacancies, vacancies for full-time jobs, vacancies for full-time job unfilled for at least a month and job vacancy rates, by province and calendar quarter. These data are only a selection. The Labour Division also produces job vacancy data classified by economic regions, provinces, some metropolitan areas, industry divisions and, 2-, 3- and 4-digit CCDO (Canadian Classification and Dictionary of Occupations) occupational breakdowns. Most of these data will be available from CANSIM[1] by July 1975.

Background to the JVS

In its *First Annual Review* of 1964, the Economic Council of Canada observed that "the lack of comprehensive data on job vacancies makes labour market analysis . . . . virtually impossible."[2] In 1966, when the new Department of Manpower and Immigration began to implement its manpower policies, the only available statistical data on labour demand were the employers' orders registered with Canada Manpower Centres. As this series recorded only a fraction of all vacant jobs, the development of more comprehensive job vacancy data was essential.

Developmental Work

In 1966, the then Dominion Bureau of Statistics and the Department of Manpower and Immigration conducted a pilot survey in seven Ontario areas. This pilot project survey yielded valuable information, which subsequently influenced the design and operation of the Job Vacancy Survey. The two most important facts discovered were that:

(1) formal records from which an accurate count of job vacancies can be made seldom exist in any but the smallest firms and establishments and

(2) responsibility for and knowledge of recruitment and hiring within large companies is frequently dispersed, both occupationally and geographically.

It was thus evident that accurate information on job vacancies could only be obtained from a respondent engaged in, or closely associated with, a centre of recruiting activity in the firm or enterpise. This conclusion resulted in the implementation in late 1967 of the profile survey, which delineated "job vacancy reporting units" as the response points in an enterprise. These special reporting units were to report job vacancy information with maximum reliability and minimum administrative inconvenience.

In the first half of 1968, the testing and evaluating of concepts, definitions and procedures of the survey were carried out. The final design of mail and interview questionnaires, as well as the preparation of detailed procedure manuals, was completed in the second half of 1968. The first computerized mailing took place in October 1968.

A master file containing specially-created job vacancy reporting units was completed in the first half of 1969 using as input the Dominion Bureau of Statistics lists of large (ES1) and small (ES2) establishments. In August, 1969, this master file contained all industrial and service sectors with the exclusion of agriculture, fishing and trapping, households, education, health and welfare, religious institutions, federal, provincial and municipal governments. First experimental tabulations were produced by the end of 1969. In the spring of 1970, the JVS master file, containing about 136,000 reporting units (now including institutions and public sectors), was completed and the survey had reached full intended coverage.

Starting in January 1970, various interim tabulations were produced for internal analytical uses of the Department of Manpower and Immigration, which was then the sponsor of the survey. The first detailed release of job vacancy data – *Summary Report on Job Vacancies* – was published jointly by the Department of Manpower and Immigration and Statistics Canada on December 23, 1971, covering the period from the third quarter of 1970 to the third quarter of 1971. The first publication of the job vacancy series in the present format *(Quarterly Report on Job Vacancies*, Catalogue 71-002) was released in July 1972. By then, the production and financing of the Job Vacancy Survey had become the sole responsibility of Statistics Canada.

Concept of a Job Vacancy

The job vacancy definition chosen for the survey evolved in part from an attempt to have some formal symmetry with labour supply measures – if an unemployed worker is one who has not worked during the reference period and is actively seeking a job, then by analogy, a vacant job is one which has not been occupied as of the reference period and is actively seeking a worker. The core of the job vacancy definition is thus current recruiting activity.

This definitional condition – coupled with the lack of formal records on job vacancies within firms – necessitated an interview phase (a sub-sample) to find out the nature and date of recruiting activity for each vacancy reported. The strict application of the activity criteria is an essential element in securing a stable and consistent measure. It also means that the information must be obtained from a respondent engaged in or close to a centre of recruiting activity in the firm.

---

* This article was prepared by Mr. J.A. Boucek, Assistant Chief, Job Vacancy Survey, Labour Division, Statistics Canada.

[1] CANSIM is a registered trade mark of Statistics Canada.

[2] Economic Council of Canada, *First Annual Review, Economic Goals for Canada to 1970,* December 1964, Ottawa, p. 178.

This problem of recalling of **activity by the respondent** (resulting in the very tight scheduling of follow-up interviews – within two weeks of response) played a role in the second element in the definition, namely the time dimension of the word "vacant". Formal symmetry with the supply measure (i.e., one week for definition of an unemployed worker) was sacrificed to overcome the recall problem. Thus, a job must have been **vacant for the full reference day** in order to qualify as a valid job vacancy.

The third definitional element is that of "externality". Employers must be seeking **workers from outside**, or at least must not be restricted to workers from inside the firm. The measure of vacancies relates, therefore, to the external labour market.

A related definitional problem concerns the treatment of vacant jobs being held for workers on lay-off subject to definite recall. These are excluded in the Job Vacancy Survey on several grounds, namely that they do not satisfy either the activity or externality criteria.

In summary, the definition of job vacancy is:

1. A job that was vacant for the full reference day;
2. for which some specific recruiting action was undertaken during a specified time period;
3. that was open to workers from outside the establishment.

Several additional items of information are also requested; job location (if different from mailing address of the reporting unit); full-time vacancies; vacancies for which recruiting action has been undertaken at some time in both the four weeks preceding the reference day and the four weeks preceding that (jobs vacant one month ago) and pay rates for full-time jobs. The "jobs vacant one month or more" provide some guidance to the "duration mix" of demand – a crucial series for potential analytical work.

Operational and Sampling Aspect[3]

The Job Vacancy Survey is one of the more complex statistical surveys undertaken on a regular basis by Statistics Canada. Because data are collected by both mail and interview twice a month, the organization of the survey requires a very tight and strict scheduling of the various operations. Each fortnightly mail-out covers approximately 43,000 reporting units.

During each bi-monthly cycle, interviews begin about a week after the reference day and continue for about 10 days, during which period about 1,000 personal interviews and more than 2,000 telephone interviews are carried out by the field personnel in eight Statistics Canada regional offices. All mail and interview questionnaires are then processed at the head office on a continuous basis.

The master file from which the 43,000 reporting units are drawn contains more than 150,000 job vacancy reporting units and is itself a sample drawn from a central file (Business Register) of about 590,000 active reference units. The master file is computer-maintained and all sampling as well as sample maintenance and up-dating is done by computer. The maintenance of the current reporting structure (profiles) of large organizations is an important element in controlling the quality of the survey.

The JVS master file is sampled on a rotating basis such that representative data are available over any period of three consecutive months. For this reason, data are tabulated and released on a quarterly basis. For operational reasons, the sample is divided into twice-monthly segments, each of which has its own reference date. This spreading of reference dates facilitates efficient use of available manpower resources.

The population of job vacancy reporting units is stratified on the basis of size, industry and location. The mail sample is also stratified by response class (mail respondents with vacancies, mail respondents with no vacancies, and non-respondents) prior to the interview phase to allow follow-up interviews of non-respondents from which an unbiased estimate of vacancies among non-respondents is obtained.

Publication of Data

Selection of publishable groups is based on the reliability of data which, in turn, is dependent on the size of the estimates. If at least two thirds of the estimates in a series are 500 or more, all the estimates in that series will be published, including those less than 500. Because of their lower reliability, users should treat estimates below 500 with appropriate caution. In each *Quarterly Report on Job Vacancies* (Catalogue 71-002) there is a more detailed description of sampling and non-sampling error, as well as a graphic representation of standard deviation (a statistical measure of sampling errors). For any level of estimate, the per cent standard deviation can be obtained from the graph.

---

[3] For more detailed information on operational and methodological aspects of the survey, see Technical Appendix, *Canadian Job Vacancy Survey, 1972,* Catalogue 71-521, Statistics Canada.

Uses of Job Vacancies Data

In general, job vacancy statistics provide much needed economic intelligence on the demand side of the labour equation and are used as inputs to programs of the Department of Manpower and Immigration and other departments, and directly by the public.

The Job Vacancy Survey yields current labour demand information (about six weeks old) about fairly detailed occupations for economic regions, larger provinces and some metropolitan areas. It must be emphasized that these statistics are entirely inappropriate for central placement operations, which must match, almost immediately, specific jobs with suitable candidates.

Although the Job Vacancy Survey was not designed to produce data for placement purposes, it does provide quarterly aggregated data indicating trends in occupational, regional and industrial categories, which serve as leading indicators for in-depth manpower analytical studies. In this way, the job vacancy data can be used as a supporting tool for placement and counselling by federal and provincial manpower agencies.

The Job Vacancy Survey provides statistical series which reflect the estimate of the total stock of job vacancies at quarterly intervals and, with varying degrees of accuracy, for different levels of occupational, regional and industrial detail.

The survey is a relatively young survey and further experience is needed in developing job vacancy data analysis. The vacancy data can be used as an indicator of economic conditions and in this context, may be applied to short-term economic forecasting.

As the survey becomes established, its role in analysis and policy-making in the labour market will increase. The availability of enough data to observe longer-term trends in vacancies, more finely disaggregated series based on yearly averages, pay rates for the vacant jobs, and seasonal adjustment of the historical data are all factors which will enhance the Job Vacancy Survey's usefulness.

There is one area where job vacancy data must be used with utmost caution; that is, the relationships between unemployment data and job vacancy data. These relationships are often being examined to measure various economic phenomena such as the degree of structural imbalance in the labour market.Also, attempts are being made to extend Phillips' Curve analysis, restricted until now to the "unemployment-price tradeoff", with the use of job vacancy data. It is important that the labour market analyst be aware of conceptual and other differences between Labour Force Survey unemployment data and job vacancy series. Some of these differences are examined in "A Note on Job Vacancy and Unemployment Statistics", published in the *Quarterly Report on Job Vacancies* 4th Quarter, 1972.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes net expenditure abroad. [2] Employer and employee contributions to social insurance and government pension funds. [3] This item is the transfer portion of interest on the consumer debt. [4] This item is equal to "personal income" less the total of "current transfers to government". **For source see** Table 1.9

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and tween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar mparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

† These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all ndustries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and ublic administration and defence. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

Table 11: employment indexes,[1] by manufacturing industry[2] (1961 = 100), based on the 1960 standard industrial classification

year and month	non-durable manufacturing[3]								durable manufacturing							
	food and beverages	rubber products	leather products	textile products	clothing	paper and allied industries	petroleum and coal products	chemicals and chemical products	wood products	furniture and fixtures	primary metal industries	metal fabricating industries[4]	machinery, (ex electrical)	transportation equipment	electrical products	non-metallic mineral products

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and trànsportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the nonth. Greater industrial and area detail and more explonatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; nitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings nd Hours (72-002), Statistics Canada.**

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 19 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relati to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, bas on 1967 expenditure patterns, are provided as a general guide to the relative importance of C.P.I. major components from May 1973 forward. [5] Includes shelter a household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from M 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes n contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
						all inventory held				
				owned[3]	held but not owned	total	raw materials	goods in process	finished products

---

[1]Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term ontracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2]Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3]Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), tatistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended ır cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores ıd for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments o consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel abricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

ource: Primary Iron and Steel (41-001), Statistics Canada.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the post. **Sources: Motor Vehicle Shipmen (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

[1] In 1975, approximately 1,600 municipalities are being surveyed.

[2] This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passag inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolita areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. Th remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when th r current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The tota value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as anging quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of em with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to vision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes ilding Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom rk, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjuste [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includ baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausag [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of prod tion will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Prod tion of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all oth stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. [2] Includ Yukon and North West Territories. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1, 500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional irlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total evenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1]This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2]Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Reconciliation of Canada-United States Balance of Payments Statistics, 1973

A report is now available presenting the results of the reconciliation of the 1973 current account bilateral balances between Canada and the United States as published in the balance of payments statistics of the two countries. The report incorporates the reconciliation of separately published trade data for 1973. It also outlines the conceptual framework adopted for the study, explains the nature of the discrepancies, and discusses the future incorporation of adjustments in the published data.

Copies of the report are available from the Balance of Payments Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6. Readers wishing more detailed information may contact D.K. McAlister, Director of that Division (613-995-0743).

1973-74 Statistics on Travel, Tourism and Outdoor Recreation

Statistics Canada recently released a report, presenting data gathered from various sources, on the many aspects of travel and recreation. Chapters on subjects such as socio-economic influences on travel, Canadian domestic travel, international travel trends, Canadian employment, and equipment and services in travel and outdoor recreations are included.

Copies of *Travel, Tourism and Outdoor Recreation, 1973 and 1974* (Catalogue 66-202) are available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6. Cost is $1.50.

Metric Conversion

Canada's upcoming change to metric units will affect Statistics Canada, and users of bureau data, in many ways. A program has been set up at Statistics Canada to co-ordinate the planning for and implementation of all metric conversion activities.

Mr. Jack MacKinnon, former Chief of the Foods, Beverages and Textiles Section of the Manufacturing and Primary Industry Division, has been appointed Coordinator of Metric Conversion and may be contacted for more information on the program. His address is Room 786, General Purpose Bldg., Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0V6 (613-996-6519).

Crime Index

The Statistics Canada Judicial Division has constructed a Crime Index for Canada for use in comparing crime levels in Canada and the United States. The Canadian measure is based on the seven Crime Index Offences used in the United States index. Neither index is intended to indicate the nature and extent of the total crime situation but only to show comparative levels within Canada and the U.S. and between the two countries.

The seven crimes used in constructing the Canadian index are (1) murder and manslaughter, (2) rape, (3) robbery, (4) wounding and attempted murder, (5) breaking and entering, (6) theft and (7) theft – motor vehicles. For all offences except murder, attempted crimes are included with the committed crimes of the same category. The classification of crimes is not exactly the same in Canada and the U.S., but the same types of crimes have been included in the indexes of the two countries.

Crime Index Offence Rates, Canada and the United States, 1973

Canada	Rate	United States	Rate
Total Crime Index	**3,463.5**	**Total Crime Index**	**4,116.4**
Murder and manslaughter	2.4	Murder and non-negligent manslaughter	9.3
Rape	7.2	Forcible rape	24.3
Robbery	59.6	Robbery	182.4
Wounding and attempted murder	10.7	Aggravated assault	198.4
Breaking and entering	896.3	Burglary	1,210.8
Theft	2,163.3	Larceny – Theft	2,051.2
Theft – Motor vehicles	324.0	Auto theft	440.1
Provincial/Territorial range:		**State range:**	
Total Crime Index:		Total Crime Index:	
High	7,196.5	High	6,703.9
Low	1,507.4	Low	1,471.5
Major city (100,000 and over) range:		**Major city (100,000 and over) range:**	
Total Crime Index:		Total Crime Index:	
High	7,828.9	High	12,018.2
Low	2,353.3	Low	2,308.1

The total crime index for Canada for 1973 was 3,463.5. This means that 3,463.5 crimes (of the seven types included in the index) were committed per 100,000 people in Canada. This compares with a rate of 4,116.4 in the U.S. The U.S. rate is higher in all categories except theft. The Yukon and Northwest Territories had a higher index rate than any province in Canada.

The Judicial Division stresses the need for caution in using these rates to make direct city-to-city comparisons. More appropriate use of these data is in determining deviations from national, provincial or state rates; in comparing cities in similar population groups; or where possible, in comparing states/provinces with similar socio-economic conditions.

Detailed information on the Crime Index Offence Rates is available in the Service Bulletin, *Law Enforcement, Judicial and Correctional Statistics,* Vol. 3, No. 1. Readers may also contact Frank A. Morrow, Judicial Division, Statistics Canada, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0Z5 (613-995-0855).

Other Publications of the General Time Series Staff

blication rmber	Title and Description
1-003F	*Revue Statistique du Canada*, mensuel. This is the French edition of the *Canadian Statistical Review*.
	Canadian Statistical Review Supplements
1-004	*Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers. Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).
1 206	*Annual Supplement to the Canadian Statistical Review*—Price $1.40 (Free to *Canadian Statistical Review* subscribers.) Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).
1 505	*Canadian Statistical Review—Historical Summary 1970*, E. and F. Price $1.50 (Free to *Canadian Statistical Review* subscribers) This publication replaces the *Historical Summary* 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review*. All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movement and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for selected economic indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 10, Table 1 – Value of Retail Trade

This table will not be updated with this issue. Shortly, data from a new survey will replace it. The new survey will be available historically from 1971 and be based on the 1970 Standard Industrial Classification.

REBASING TO 1971

A note on Statistics Canada's major rebasing program is featured in this month's OBSERVATIONS. See page 116.

1975 CAPITAL SPENDING INTENTIONS

A recent Statistics Canada report, **Private and Public Investment in Canada, Outlook 1975,**[1] *presents the 1975 capital spending intentions for all sectors of the economy. This article is extracted from the report.*

The capital spending estimates cover total outlays for construction and for the acquisition of producers' machinery and equipment by Canadian businesses, institutions and governments, together with expenditures for housing. In all, about 24,000 establishments were surveyed for their investment intentions.

Information on capital spending intentions provides a useful indication of market conditions both in the economy at large and in particular industries. Since such expenditures account for a large and relatively variable proportion of gross national expenditures, the size and content of the investment program provides significant information about demands to be placed upon the productive capacities of the economy during the period covered by the survey. In addition, information on the relative size of the capital expenditures program planned, both in total and for individual industries, gives an indication of the views management hold on prospective market demands in relation to present productive capacity.

Appraisal of the 1975 Capital Expenditures Program

Capital spending in Canada during 1975 by all sectors of the economy is expected to reach $36,881 million. This total represents a 13.7 per cent increase from the 1974 level of $32,451 million. These estimates are in current dollars and reflect the level of planned intended outlays by respondents at the time of filing of their completed questionnaires between November 1974 and January 1975.

Capital outlays for new construction are expected to reach $23,080 million in 1975, an increase of 12.6 per cent from the 1974 program of $20,498 million. The previous rates of increase for new construction were 20.9 per cent and 17.2 per cent, achieved in 1974 and 1973 respectively. The reduced strength in this activity in 1975, compared with gains during 1974, results mainly from a 3.7 per cent decline expected in residential construction based upon a level of 210,000 starts during 1975. Non-residential construction on the other hand is registering an increase of 21.0 per cent from 1974.

Acquisition of new machinery and equipment during 1975 is expected to amount to $13,802 million, 15.5 per cent more than the 1974 total of $11,953 million. Further appraisal of machinery purchases during 1973 and 1974 showed the 1974 spending to be 6.0 per cent higher than indicated at mid-year and 23.7 per cent more than 1973.

The business group (the first nine sectors in Table 1) expects capital outlays of $23,567 million, 18.1 per cent higher than the $19,952 million last year, while capital spending by institutions and government departments is estimated at $6,600 million in 1975, an increase of 19.5 per cent from 1974.

Utilities contribute the largest advance in the business sector for 1975. The total of $7,663 million is 25.3 per cent above the 1974 level of $6,116 million, resulting mainly from expanding capital programs of electric power, telephone, railway and urban transit systems.

Plans for capital outlays in manufacturing also indicate substantial strength in a number of industry groups in 1975 for a resultant overall gain of 22.3 per cent over 1974. The most notable groups in this expansion are chemical products, including heavy water plants, primary metals and paper mills. A number of the manufacturing groups, such as food and beverages, transportation equipment and wood products, show lower intended capital spending for 1975 than the high levels achieved in 1974.

In the remaining industries of the business sector, some moderation of the rate of capital spending is indicated. The strength of the trade-finance-commercial group shown last year is not being carried forward into 1975 to the same degree. Acquisition of capital equipment for leasing to others and construction of facilities for the Olympics contribute to the moderate strength in commercial services, but outlays for hotels and for retail stores are expected to be lower in 1975. The primary industries group is registering a gain of 16.3 per cent in the agriculture and fishing total, and 14.0 per cent in the petroleum and gas group, where tar sands developments added significantly to the total of capital outlays. Metal mining capital outlays are expected to increase by 13.1 per cent in 1975.

In the social capital group (items 10 and 11 in Table 1) excluding housing, institutions are reporting an expected 16.4 per cent gain over 1974, slightly less than the 17.3 per cent addition registered in 1974. Increases are indicated for both hospitals and for educational installations. The three levels of government show an increase of 20.4 per cent in 1975 compared with a 24.1 per cent addition to capital spending in the preceding year. The provincial governments' increase of $406

---

[1] 1973 – final estimates; 1974 – estimates subject to revision; 1975 – intentions.

million is the largest portion of the year-over-year gain and almost the same in percentage terms as the increase for the federal government.

Repair Expenditures

Total non-capitalized repair expenditures for existing structures and machinery are estimated at $9,688 million in 1975, a growth of 12.1 per cent over the $8,644 million in 1974. This percentage gain is the same for repairs to structures ($4,168 million) and for repairs to machinery and equipment ($5,519 million). Addition of the expenditures for repairs to those of capital spending on new structures represents a total potential construction activity of $27,248 million, 12.5 per cent above the 1974 level. The addition of acquisition of new machinery to non-capitalized repair amounts to $19,321 million, a gain of 14.4 per cent from 1974.

Capital and Repair Expenditures by Provinces and Territories

The expenditures shown for each province or territory represent the value of construction work put in place and the value of machinery and equipment acquired for use within the province or territory (Table 2). Such expenditures represent gross additions to the capital stock of the province or territory, and are a reflection of economic activity in that area. However, the actual production of these assets may generate its major employment and income-giving effects in other regions. For example, the spending of millions of dollars on plants and equipment in western Canada may generate considerable activity in machinery industries in Ontario and Quebec as well as construction activity in the western provinces.

It should be appreciated that there are statistical difficulties in making a precise geographic allocation of past or anticipated investment since many business firms operate in several provinces and neither record nor plan their capital expenditures geographically. As a result, it has been necessary to use approximate breakdowns in many cases. Such is the situation for investment in railway rolling stock, ships, aircraft and certain other items.

The degree of detail provided by province is dependent to some extent on the validity of methods used to obtain provincial estimates and also on limitations imposed by the Statistics Act. These restrictions have particular relevance for the smaller provinces and for the territories.

Comparison of provincial totals of intended capital spending in 1975 with 1974 shows the following pattern of increases: Saskatchewan, 22.0 per cent; Alberta, 16.9 per cent; Ontario, 15.6 per cent; New Brunswick, 14.5 per cent; Quebec, 13.8 per cent; British Columbia, 10.1 per cent; Manitoba, 9.1 per cent; Newfoundland, 4.9 per cent; Nova Scotia, 3.9 per cent. Decreases are shown for Prince Edward Island (5.8 per cent) and for the Yukon and Northwest Territories (7.5 per cent). In each instance, the current dollar year-over-year change shows less strength than was shown in the comparison of 1974 with 1973.

A 7.4 per cent gain in 1975 for the Atlantic Region results mainly from higher intended capital outlays in institutions and governments and by utilities. A lower total in manufacturing is attributable, in large part, to the attainment of the peak in construction in a number of large projects during 1974, particularly in Nova Scotia and in New Brunswick. In the other industries, real estate development in non-residential buildings is up by 22.6 per cent but the housing sector is not expected to reach the 1974 current dollar total in the region. Primary industries reflect a 5.0 per cent increase for the region but, in real terms, this percentage likely represents a small decline.

In the province of Quebec, an overall increase of 13.8 per cent in 1975 represents gains in most sectors except in housing where the level is expected to be 4.8 per cent lower than in 1974. A major source of strength for manufacturing is in the primary metals and chemical products groups while electric power generations adds significantly to the 37.1 per cent of capital expansion in utilities. The public sector shows an advance of 15.3 per cent compared with 21.5 per cent in 1974.

Considerable strength in manufacturing is shown for Ontario during 1975 in a 45.9 per cent increase from 1974. Chemical products, primary metals, oil refineries, non-metallic minerals and paper products are the main groups contributing to the higher 1975 level. In utilities, added electric power plant construction is expected to constitute most of the gain of $388 million – an 18.4 per cent increase from 1974. The trade-finance-commercial group registers marginal or no change going into the current year. In housing and social capital, the residential construction is expected to be 3.4 per cent less than last year's total, but social capital by institutions and governments, on the other hand, shows a gain of 19.7 per cent.

The 16.2 per cent addition in the Prairie Region results mainly from strong gains in utilities (31.2 per cent), in primary industries (23.2 per cent), and in the public sector (21.2 per cent). Manufacturing for the region shows little or no change regionally or provincially from 1974. The trade-finance-commercial group is moderately increasing at 3.5 per cent, and housing is expected to be down by 4.6 per cent. Provincially, within the region, the rates of expansion for utilities and for institutions and governments are the most pronounced in Saskatchewan. Capital spending in the primary industries shows the largest increase in Alberta, partly as a result of the tar sands development.

TABLE 2. Summary of Provinces and Territories, 1973 to 1975[1,2]

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documenta evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Cens of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancé and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. Th seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and th change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Include net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governme business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and gover ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expend ture is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The differen between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are fected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter ovements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of ice change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are eated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of e treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. he quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have en generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source e Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and etween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar omparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour forc in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividin the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. Th estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For othe explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as ose laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. om January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by e number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries clude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate d public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In dition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes blishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

---

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the onth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; nitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings nd Hours (72-002), Statistics Canada.**

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 196 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relati to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, base on 1967 expenditure patterns, are provided as a general guide to the relative importance of C. P. I. major components from May 1973 forward. [5] Includes shelter a household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from M 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes no contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
				owned[3]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term ntracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total anufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), atistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments o consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel abricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

ource: Primary Iron and Steel (41-001), Statistics Canada.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipme (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refine production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane com mingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes sto oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable bas prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricati oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

[1] In 1975, approximately 1,600 municipalities are being surveyed.

[2] This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passa inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolit areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. T remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when th r current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to revision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. [2] Includes Yukon and North West Territories. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential ortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills wing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan ompanies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed y personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not easonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer redit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) ('000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products			
	unadj.	S.A.		wheat	other grain and grain products	fresh fruits and vege-tables	other agri-culture products	animals and their products	prepared food products	iron ore and concen-trates	other metal ores and concen-trates	potash	coal, sand, cement and other mine products

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralize data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearin Centres (61-001), Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Rebasing to 1971

Because of structural changes that occur in the economy it is necessary to change periodically the base year of index numbers and constant dollar time series: 1971 was selected about three years ago because it is ten years more current and because there were no major disruptions or developments during that year that would disqualify it. The data to convert many of the major series became available only recently and as a result Statistics Canada will proceed during 1975 with the conversion of most of its index numbers and constant dollar time series from a base of 1961 = 100 to 1971 = 100.

There are basically three kinds of activities that will occur under the general heading of rebasing:

(1) Time Rebasing

Series are arithmetically converted to 1971 = 100 by dividing by 1971 values. There is no effect on rates of change in any series rebased this way. Series which are aggregated from component base-weighted series will show different rates of change over time because there is an implicit weight change but, in practice, the magnitude of such differences is usually quite small.

(2) Time and Weight Rebasing

Series are arithmetically linked as in time rebasing, and 1971 weights are introduced explicitly at the component level. This could have the most substantial effect on comparative rates of change, depending on the magnitude of the changes in weighting patterns.

(3) Specification Changes

In some cases, rebasing offers an opportunity to introduce changes that have been pending for some time. These include classification changes, degree of primary disaggregation, introduction of more representative price quotations and other "housekeeping" changes.

The projected schedule is as follows.

External Trade Division – Price and quantity indexes will be time- and weight-rebased for publication during June or July. At the same time, there will be a substantial expansion in the degree of disaggregation, upgrading of price series used, and existing Paasche volume indexes will be replaced by Laspeyre indexes. These changes will bring Canada in line with most other countries and remove most of the existing discrepancies between series published by the External Trade Division and Gross National Product and Balance of Payments Divisions.

Prices Division – The Consumer Price Index will be time-rebased only, since it already incorporates 1967 expenditure patterns (1969 in the case of detailed food expenditure patterns). Industry Selling Price Indexes will be time- and weight-rebased. Publication is planned for July or August.

Industry Product Division – All indexes will be time-rebased and will also incorporate new weights and a number of specification changes. Owing to the size of this particular program, it will not be completed before the end of 1975. As a consequence, the normal spring (1975) revision ot 3 to 4 years of data will not be made.

Gross National Product Division – All series will be time-rebased. Since the Gross National Product Division produces no primary price series of its own, weight changes will be incorporated to the extent that they are available at that time from supplying Divisions (basically Prices and External Trade). There will also be a number of specification changes, especially in fixed capital, inventories, external trade and, to a lesser extent, in government current expenditures. It is expected that all price indexes and constant dollar values will be presented on a 1971 = 100 base in the first quarter publication in June 1975.[1]

Labour Division – Complete plans for re-basing Labour Division series are still under discussion.

An article on the theoretical background and an analysis of the effects of this major rebasing will be featured in the August issue of the *Canadian Statistical Review.*

The Current Annual Rate of Change in the Consumer Price Index

The notion of **current** annual rate of change in the Consumer Price Index is a frequently misunderstood one. Confusion arises because there are many different ways of calculating rate-of-change measures for a time series such as the CPI.

Perhaps the most commonly used measure has been the rate of change between corresponding months one year apart. This is not entirely valid as an indicator of the **current** trend because it does not take into account adequately the events of the most recent period. A more appropriate representation of the current annual rate of change can be derived by taking the growth rate compounded over the preceding three months and raising it to an annual rate, using seasonally adjusted data. The three-months span for averaging purposes is long enough to reduce the effect of irregular distortions in the data, yet it is short enough to be representative of the current trend in the CPI.

---

[1] *National Income and Expenditure Accounts,* Catalogue 13-001, quarterly. Usually, publication of National Accounts data for the first quarter of any year is published in June of that year.

The comparison of the current month's CPI with the CPI for the corresponding month one year earlier is a valid measure of change for a number of purposes (including escalation of transfer payments and wage contracts) but this comparison may not reflect the **current** annual rate of inflation. Also, when price changes are accelerating, this particular measure tends to understate the current rate of inflation, and when price changes decelerate, it exaggerates what is currently happening.

The Prices Division of Statistics Canada have published a full explanation of the various ways of computing annual rates of change in the CPI and the appropriate uses for each measure. See "A Note on the Current Annual Rate of Change in the Consumer Price Index", in *Retail Prices and Living Costs* (Catalogue 62-005) Volume 4, Number 4, April 1975. Copies are available from Publications Distribution, Statistics Canada, Ottawa, Ontario, K1A 0T6.

More information can be obtained from Mr. Hannett, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0V5 (613-994-5850).

New Housing Price Statistics

In January 1975, the Prices Division released New Housing Price Indexes. These indexes are estimates of the change in the selling prices of new houses in six metropolitan areas (Montreal, Ottawa/Hull, Toronto, Winnipeg, Calgary, Edmonton). They are base-weighted (Laspeyres-type) indexes of builders' selling prices measuring pure price change for work put-in-place and land, for new residential construction. Prices include the dwelling structure, land and services to land if these are not provided separately by the municipality, but they exclude legal fees, provincial land transfer tax and similar costs to the buyer for property acquisition. The indexes include only single unit houses except for Toronto and Ottawa/Hull where single, semi-detached and row condominium units are priced.

These New Housing Price Indexes are not comparable with the "Housing" component of the Consumer Price Index which measures the changes in the cost of such elements in the consumer budget as household operation and shelter.

The accompanying table presents the price indexes since January 1974.

The series starts with 1971 data, and current indexes are published in *Construction Price Statistics, Monthly Bulletin,* (Catalogue 62-007) and *Construction Price Statistics, Quarterly Report* (Catalogue 62-008). Both publications may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ontario, K1A 0T6.

More information on the New Housing Price Indexes is available from R. Lowe, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0V5 (613-994-9387).

New Housing Price Indexes, 1971 = 100

	Montreal	Toronto[1]	Ottawa/Hull[1]	Winnipeg	Calgary	Edmonton
1974:						
January	156.0	154.3	158.0	142.5	149.7	161.3
February	164.3	155.0	164.8	144.5	150.1	153.9
March	169.9	155.0	169.8	148.6	151.5	160.6
April	171.5	175.8	172.4	157.1	158.1	164.3
May	177.7	176.7	173.3	169.5	158.2	173.9
June	181.4	179.2	173.8	169.5	158.7	175.0
July	183.1	179.2	174.2	170.4	168.2	178.4
August	183.4	179.2	174.0	171.3	168.2	180.6
September	186.1	178.0	173.5	172.0	168.2	183.0
October	186.4	177.8	173.5	172.0	170.3	185.8
November	186.5	177.8	173.5	172.0	173.0	183.5
December	185.5	171.3	173.5	172.0	173.3	182.7
Annual	177.7	171.6	171.2	163.5	162.3	172.8
1975:						
January		169.8	173.3			184.0
February		169.8	173.3			184.5

[1] These indexes include single detached, semi-detached and row condominium houses. Indexes for all other areas include single detached houses only.

1975 Capital Spending Intentions – *(Continued from page 7)*

In British Columbia, total capital outlays in 1975 are expected to increase by 10.1 per cent from 1974. Spending for social capital by institutions and governments is showing the largest gain at 23.6 per cent followed by utilities at 21.2 per cent. In manufacturing, reductions in capital programs of wood and chemical products offset in part increases for oil refineries, primary metals, non-metallic minerals and paper products, resulting in an increase of 9.2 per cent from the preceding year. The trade-finance-commercial group is expected to advance by 8.4 per cent, while housing and primary industries are estimated to decrease by 2.5 per cent and 1.9 per cent respectively.

The Territories' decrease of 7.5 per cent reflects a decline of 11.2 per cent for the primary industries group and lower spending by utilities. The gain of 19.6 per cent for institutions and governments was not large enough to offset reductions in capital spending by the other industries.

Capital and Repair Expenditures by Metropolitan Areas – Manufacturing

The expenditures are shown here for 14 of the largest metropolitan areas of Canada for manufacturing only (Table 3). Capital and repair expenditures are not available for all other sectors which are surveyed only at the provincial or territorial level. Statistics for some individual manufacturing industries are also provided for Montreal, Toronto and Vancouver in the main report.

The degree of detail released for manufacturing by metropolitan areas is limited because of the confidentiality clauses of the Statistics Act.

Business and Social Capital

Table 4 presents a regrouping of the various S.I.C. industries included in Table 1 into the categories of Business Capital and Social Capital. A supplementary sheet identifying the individual industries included in each item is available on request from the Construction Division.

Private and Public

Data on the total capital and repair expenditures for Canada divided into Private (non-government) and Public (government) categories are presented in Table 5.

The Public category includes government enterprises for municipal, provincial and federal governments, municipal hospitals and schools, provincial hospitals, schools and universities, federal government housing, and government departments' expenditures for the three levels. For additional details, see the footnotes at the bottom of Table 5.

---

[1] 1973 – final estimates; 1974 – estimates subject to revision; 1975 – intentions.

[2] These categories cover, in general, government-owned establishments whose principal source of revenue is derived from the provision of goods and services to the public.

[3] The total for federal government departments includes data for departmental crown corporations and excludes data for proprietary crown corporations which are all classified as enterprises. Agency crown corporations, on the other hand, are provisionally classified in part to enterprises and the remainder to government departments. Estimates for government departments are meant to reflect the capital outlays likely to be achieved and therefore could differ from other series representing stated intentions of capital spending, particularly for municipalities.

[4] These categories include provincial hospitals, schools and universities, municipal hospitals and schools and federal government housing.

003F *Revue Statistique du Canada*, mensuel.
This is the French edition of the *Canadian Statistical Review*.

Canadian Statistical Review Supplements

004 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

206 *Annual Supplement to the Canadian Statistical Review*—Price $1.40 (Free to *Canadian Statistical Review* subscribers.)

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

505 *Canadian Statistical Review—Historical Summary 1970*, E. and F. Price $1.50 (Free to *Canadian Statistical Review* subscribers)

This publication replaces the *Historical Summary* 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review*. All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

CANSIM Manuals and other Publications (Cont'd)

*12-530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.40

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)

*12-531 *CANSIM: Users Manual for Data Retrieval and Manipulation* (Occasional) 1973 edition—Price $2.10
Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)

— CANSIM: *Summary Reference Index* (Annual, with periodic amendments) 1974 edition—Free on request.
This index summarizes data available from CANSIM and provides matrix identifiers.
Order by title from CANSIM.

— CANSIM: *Series Directory* (Annual, with periodic amendments) 1974 edition—Price $15.00, or $20.00 with amendment service.

The CANSIM *Series Directory* contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the *Summary Reference Index* and CANSIM *Manual for Data Retrieval and Manipulation* (12-531) to order series from Statistics Canada.
Order by title from CANSIM.

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movement and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

11. Government Expenditures 115

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 9, Table 9 – Manufactured Food

Series D 3110 "Soups, canned", has been deleted from the Review because quarterly data were confidential under the Statistics Act.

Section 10, Table 1 – Value of Retail Trade

This table will not be updated with this issue. Shortly, data from a new survey will replace it. The new survey will be available historically from 1971 and be based on the 1970 Standard Industrial Classification.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS

First Quarter 1975 – Advance Information

Following normal practice, data from 1971 to 1974 have been revised; in addition, constant dollar data have been rebased to 1971. While major movements have been preserved, the combined effect of revision and rebasing has altered some rates of growth substantially.[1] *An extended analysis and further details on the rebasing may be found in the publication* **National Income and Expenditure Accounts,** *Catalogue 13–001, to be released in July.*

Gross National Product in the first quarter of 1975, seasonally adjusted at annual rates, was $146,512 million, up 0.3 per cent from the last three months of 1974. In real terms, however, GNP declined on the quarter by 1.4 per cent and was down 2.0 per cent from the peak achieved in the first quarter of 1974. The quarter was characterized by a recovery in consumer expenditure, further deterioration in residential construction and in the external trade sector, and some moderation in the rate of change of prices. Despite the continuation of the recessionary pattern which began in the second quarter of 1974, growth was reasonably strong in the first quarter with the exception of exports and the rate of inventory accumulation; thus, final domestic demand, which excludes these components, was up 1.5 per cent in real terms on the year and 1.3 per cent on the quarter.

Personal expenditure on consumer goods and services rose to a level of $86,204 million, up 3.4 per cent from fourth quarter 1974. This increase was considerably larger than the corresponding rise in personal disposable income, 2.0 per cent, resulting in a drop of almost $1,000 million in personal saving. Among the components of consumption, growth was strongest in durable goods, which rose by 6.7 per cent from an extremely weak fourth quarter. In 1971 dollars, total consumer expenditure rose by 1.4 per cent, with an increase in the implicit price index of 1.9 per cent. This compares with a price increase of 3.6 per cent in the fourth quarter.

Total gross fixed capital formation was moderately strong in the first quarter, rising by 3.6 per cent to $35,448 million. However, the overall rate of increase was reduced somewhat by the rather bleak situation in investment in business residential construction, which declined by 4.8 per cent to a level of $6,820 million. This was the third straight quarter of substantial declines in residential construction, resulting in a first quarter level 10.9 per cent lower than that of a year ago. On the other hand, business investment in machinery and equipment remained strong and rose to $12,408 million, up 7.4 per cent from the fourth quarter.

Following six consecutive quarters of inventory accumulation of $2,000 to $3,000 million, the value of the physical change in inventories in the first quarter was $1,076 million, down by more than $2,000 million from the previous quarter. This decline was entirely accounted for by the change in non-farm inventories. Although not a guarantee of recovery, this pattern often precedes an upturn, as businesses liquidate inventories before resuming production.

As mentioned earlier, a major weakness in the first quarter was the foreign trade sector, reflecting the current recession in the United States and elsewhere. Exports, which account for about one quarter of Gross National Expenditure, were down by 4.6 per cent to a level of $38,196 million; in real terms, this represents a decline of 6.6 per cent. Since imports declined by only 2.6 per cent in real terms, this has raised the trade deficit to $6,652 million in 1971 dollars, an increase of $824 million from the previous record established last quarter.

On the income side of the national accounts, wages, salaries and supplementary labour income rose by 1.5 per cent to $82,364 million; the relatively weak growth rate is mainly attributable to declining employment. Wages and salaries in the goods-producing industries showed virtually no change in the first quarter, a marked deceleration from the 3.7 per cent increase recorded in the fourth quarter. On the other hand, wages and salaries in the service-producing industries rose by 2.1 per cent after a gain of 4.2 per cent in the previous quarter. Corporations profits before taxes declined for the second straight quarter to $16,612 million, down 4.7 per cent from the fourth quarter.

The overall implicit price index for gross national expenditure rose by 1.7 per cent in the first quarter compared with 1.4 per cent in the fourth, and 3.7 per cent one year ago. However, this index may be distorted by large transitory movements in the change in inventory deflator, so that a more accurate picture of price movements is given by the implicit price index for gross national expenditure net of the value of the physical change in inventories: this index rose by 1.1 per cent in the first quarter, compared with 2.4 per cent in the fourth. Among major expenditure components, the increase in price was strongest in imports of goods and services, up 3.2 per cent on the quarter. Due to an increase of only 1.1 per cent in the deflator for personal expenditure on semi-durable goods, the personal consumption deflator rose by 1.9 per cent a moderate increase when compared with the experience of the past year.

---

[1] Real growth rates for the period 1971 to 1974 have been revised as follows: 1971, from 5.6 per cent to 5.8 per cent; 1972, from 5.8 per cent to 6.0 per cent; 1973, from 6.8 per cent to 6.9 per cent; and 1974, from 3.7 per cent to 2.8 per cent.

TABLE 1. National Income and Gross National Product, by Quarters, 1974 and 1975

Seasonally adjusted at annual rates

Gross National Product at market prices excluding accrued net income of farm operators	*131,000*	*134,648*	*140,720*	*142,216*	*137,146*	*143,312*

[1] Excludes profits of government business enterprises.

[2] Includes the withholding tax applicable to this item.

[3] Includes profits (net of losses) of government business enterprises and other government investment income.

[4] Includes an arbitrary smoothing of crop production, and standard seasonal adjustment for withdrawals of grain from farm stocks and for the changes in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.

[5] Includes net income of independent professional practitioners.

[6] See footnote 4, of Table 2.

Business:						
Non-farm[4]	3,156	1,776	2,440	3,304	2,669	780
Farm and grain in commercial channels[5]	– 792	12	808	– 148	– 30	316
Exports of goods and services	36,328	37,480	40,120	40,024	38,488	38,196
Deduct: Imports of goods and services	– 36,764	– 38,608	– 42,804	– 44,524	– 40,675	– 44,760
Residual error of estimate	32	– 20	288	572	218	720
Gross National Expenditure at market prices	**134,340**	**138,592**	**144,444**	**146,144**	**140,880**	**146,512**
Final domestic demand	132,400	137,928	143,552	146,856	140,184	151,280
Detail of farm inventories and grain in commercial channels:						
Value of crop production and depletions of farm stocks of grain	– 676	– 652	– 96	– 164	– 397	388
Change in other farm-held inventories	– 40	308	532	160	240	24
Grain in commercial channels	– 76	356	372	– 144	127	– 96

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication *National Income and Expenditure Accounts,* Catalogue 13-001.

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one-fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

TABLE 3. Gross National Expenditure in Constant (1971) Dollars, by Quarters, 1974 and 1975

Seasonally adjusted at annual rates

	1974					1975
	I	II	III	IV	Year	I

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documenta evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Cens of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancé and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

See footnotes, Table 3.

*In addition to the selected Labour Force information published here, there are approximately 2,100 Labour Force series available on CANSIM. The series provide basic labour force characteristics, by geographic area, age, sex and marital status.

Table 4: selected series by sex and main age group (thousands of persons)

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S. I. C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explonatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 3: manufacturing inventories[1] by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total inventories owned	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.

---

[1] Production plus imports less re-exports, minus exports.

[2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past.

Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do'not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Quarterly Shipments of Flush Type Doors (wood) by Canadian Manufacturers (35-004), Hardboard (36-001), Rigid Insulation Board (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Stoves and Furnaces (41-005), Steel Wire and Specified Wire Products (41-006), Domestic Refrigerators and Freezers (43-001), Cement (44-001), Concrete Products (44-002), Gypsum Products (44-003), Mineral Wool (44-004), Products made from Canadian Clay (44-005), Asphalt Roofing (45-001), Sales of Paints, Varnishes, and Lacquers (46-001), Statistics Canada.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when their current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to revision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. [2] Includes Yukon and North West Territories. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals due to rounding and partial revisions. [1]Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2]Includes loans on the security of household property. [3]Not available on a monthly basis. [4]Includes loans to finance companies which are affiliates of retail merchandisers. [5]Religious, educational, health and welfare institutions. [6]Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies. **Sources: Bank of Canada Review and Dept. of Finance.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

---

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500, 000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Brief History of the Canadian Statistical Review

In January 1926, the first issue of the *Monthly Review of Business Statistics* was published. This 28-page bulletin evolved to become the *Canadian Statistical Review.*

The preface to Volume 1, Number 1 of the *Monthly Review* began with the paragraphs: "The collection and interpretation of statistics relating to the current trend of production and of general economic conditions has in recent years been greatly extended. Statistics of current business, with forecasts based thereon, are now being published by numerous private agencies throughout the world. Various governments are also issuing periodical reviews of general statistics which give special attention to the problem of business trends.

In recent years, Canada has taken its place amongst the leading trading and industrial countries, thus necessitating a broader outlook on the part of those responsible for directing business policy".

These statements are as true in 1975 as in 1926; however, a look at some of the statistics published in the *Monthly Review of Business Statistics* in January 1926 show how much the economy has changed since then.

In 1925, there were 139,311 passenger cars produced. In 1974, there were more than 1,200 million cars produced.

Agriculture was as great a concern then as now. In 1925, the value (to farmers) of principal field crops in Canada was estimated at $1,159 million compared with 1974 farm cash receipts from crops of $4,002.5 million.

Rubber imports increased from 47.3 million pounds in 1925 to 165.8 million pounds in 1975; however, in 1924, the imports were of natural rubber in contrast to the 1975 imports which are almost all synthetic. During the same period, newsprint production rose from 1.4 million tons to 9.5 million tons.

The value of building permits issued in 1924 was $123.7 million. (Sixty cities were surveyed.) In 1974, a survey of about 1,600 municipalities showed the value of building permits had increased to $9,280 million.

The *Monthly Review of Business Statistics* reported these and many other statistics in such areas as employment, wholesale prices, banking and currency, investment and speculation, trade, transportation, etc. Also published were data on business conditions in the United Kingdom and the United States. Charts were included to show trends in Canadian business.

The *Monthly Review* continued in this format adding more data as time went on. In January 1941, Vol. 15, No. 1 of the publication began reporting national income information. This coincided with the release of the bureau's first report on national accounting.

By December 1946, the *Monthly Review of Business Statistics* had grown from 13 pages to 96 pages, mostly tables containing data on the Canadian economy and some highlights of other countries.

In 1948, the format and the title of the report changed drastically. Now called the *Canadian Statistical Review,* the January 1948 issue was increased in size to 8 1/2 by 11 inches (its present size) and contained 124 pages. The data tables were divided into sections by general topic and were prefaced by a note and charts on general Canadian economic conditions.

The format has remained basically the same for 27 years. The type size decreased as more statistics were added. One significant change was the addition of CANSIM identifiers to the data in the Review, in October 1972. (Since 1969, computer tapes containing with all series in the CSR have been available monthly from CANSIM.)

In 1975, the Review has both feature articles and shorter items called OBSERVATIONS. The section on selected economic indicators has been expanded to include both graphs and tables. The tabular portion of the present CSR (Sections 2 to 13) contains greatly increased numbers of statistics reflecting all aspects of Canada's economy.

Although the changes during the first 50 volumes of the Review, seem numerous, the basic purpose of informing readers of "general economic conditions" in Canada has remained the same.

The CSR staff are always examining new ways of presenting this information to its readers and are now investigating producing the Review using the computer facilities connected with CANSIM.

Revision of Industry Selling Price Indexes

Prices Division has completed a major revision of the Industry Selling Price Indexes. The time and weight bases have been changed to 1971 and the industries are now classified according to the 1970 Standard Industrial Classification. There has also been an increase in the number of industries and commodities as well as better price samples for continuing series.

The revised series from 1971 forward reflect the relative importance of commodities sold in 1971. Indexes for years before 1971 have been arithmetically converted from the previously published 1961=100 indexes.

More information on the revision is available from Paul Stoochnoff, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (613-994-9867)

Federal-Provincial Committee on Agricultural Statistics

Representatives of governments and agribusiness gathered in Ottawa for the 26th annual meeting of the federal-provincial committee on agricultural statistics, held March 11 and 12, 1975. The meetings began with statements from the provincial governments including proposals for developments and recommendations. Officials of Statistics Canada's Agriculture Division had previously tabled reports outlining the work of various sections since the 1974 conference.

Papers on various Agriculture Division special projects were presented. The topics covered were:

- remote sensing and crop acreage estimation
- developments in the Agricultural Enumerative Survey
- new methodology for dairy statistics
- response to the semi-annual agriculture survey
- the Grain Stabilization Act and its impact on Statistics Canada.

In addition, delegates from outside Statistics Canada spoke to the meeting on the following subjects:

- metric conversion and the Canadian grain industry
- CANFARM as a source of statistical data
- agricultural land sales data.

More information on the 1975 committee meeting is available from the Agricultural Division, Statistics Canada, Ottawa, K1A 0V5 (613-994-9828)

Handbook of Agricultural Statistics

In April 1975, the Agriculture Division released the latest *Handbook of Agricultural Statistics, Part VI, Dairy Statistics.* This publication consolidates previously published monthly and annual dairy statistics and covers the period 1920 to 1973.

Copies of the report (Catalogue 21-515, occasional) are available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (Price: $1.50)

New Report on Family Spending

Detailed family expenditure information is presented in a new report from the Consumer Income and Expenditure Division. The data, which refer to 1972, were collected in 1973 in St. John's, Halifax, Montreal, Ottawa, Toronto, Winnipeg, Edmonton and Vancouver. Some data are also available for Whitehorse and Yellowknife.

The detailed information in the report allows analysis of family expenditures patterns classified by various family characteristics such as family size, income, home ownership status, etc. Statistics on 1969 family expenditures are also included for easy comparison.

Copies of *Urban Family Expenditure 1972,* (Catalogue 62-541, occasional) may be ordered from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (Price: $2.80)

Canadian Colleges and Universities

A recent Education Division report, *A Short Guide to Canadian Universities and Colleges,* provides information on post-secondary degree-granting institutions. The report begins with a description of university education in Canada, how it began, the stages of development and the present situation.

General admission requirements are briefly discussed, and there are some notes for foreign students, outlining their special needs and problems.

A table shows the various courses and degrees offered at Canadian universities.

This publication, a joint effort of Statistics Canada and the Association of Universities and Colleges in Canada, will be very useful to prospective students and teachers. More detailed information is available in Catalogue 81-230, *Universities and Colleges of Canada.*

Copies of *A Short Guide to Colleges and Universities in Canada* (Catalogue 81-240) may be ordered from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (Price: $2.10)

New Economic Indicators Publication

The United States Department of Commerce recently issued the first copy of *International Economic Indicators and Competitive Trends.*

This quarterly report is designed to give U.S. business, government and the academic community vital information for assessing the U.S. competitive position in world markets. It presents comparative data on foreign trade, the domestic economy, prices and industrial performance for the U.S., Canada, France, the Federal Republic of Germany, Japan and the United Kingdom. Information on Italy and the Netherlands is to be added in future issues.

International Economic Indicators and Competitive Trends is available from the Superintendent of Documents, Government Printing Office, Washington

D.C. 20402, United States of America. Annual subscription rate is $12.65 ($15.85 for mailing outside the U.S. or Canada).

After-tax Income

Information on after-tax income of Canadians in 1971 has been released in a new report by Statistics Canada. This is the first issue of comparative before- and after-tax income data by the Consumer Income and Expenditure Division.

The report shows the distribution of after-tax income by family size and by region, and shows the percentage of the population in various income groups.

The report, *Income After Tax, Distribution by Size in Canada, 1971,* (Catalogue 13-210) is available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (Price: $1.40)

Review of Canada's Mineral Industries

Some of the data gathered in the 1972 Annual Census of Mines have been published in a recent Statistics Canada report, *General Review of the Mineral Industries, Mines, Quarries and Oil Wells* (Catalogue 26-201).

The Review presents the principal statistics of Canada's mineral industries, including production data, value of products, prices, provincial breakdowns and some historical information.

The appendix gives some background on the Census of Mines and details the methods used in computing mineral production in Canada.

The Review is available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (Price: $1.05)

Other Publications of the Current Economic Analysis Division

Publication number — Title and Description

11–003F *Revue Statistique du Canada*, mensuel.
This is the French edition of the *Canadian Statistical Review*.

Canadian Statistical Review Supplements

11–004 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

11–206 *Annual Supplement to the Canadian Statistical Review*—Price $1.40 (Free to *Canadian Statistical Review* subscribers.)

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

11–505 *Canadian Statistical Review—Historical Summary 1970*, E. and F. Price $1.50 (Free to *Canadian Statistical Review* subscribers)

This publication replaces the *Historical Summary* 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review*. All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

CANSIM Manuals and other Publications

— *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free on request.
Order by title from CANSIM.

— CANSIM: *Progress Report*—Free on request.
Order by title from CANSIM.

— CANSIM/SIS—*A New Phase of Development*—Free on request.
Order by title from CANSIM.

Publication number — Title and Description

CANSIM Manuals and other Publications (Cont'd)

*12–530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.40

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the Retrieval manual. (Available in French, catalogue no. 12-530F.)

*12–531 *CANSIM: Users Manual for Data Retrieval and Manipulation* (Occasional) 1973 edition—Price $2.10

Gives detailed instructions on procedures for obtaining data from the CANSIM data base. The new edition reflects enlargement and improvement of the retrieval package. (Available in French, catalogue no. 12-531F.)

— CANSIM: *Summary Reference Index* (Annual, with periodic amendments) 1974 edition—Free on request.
This index summarizes data available from CANSIM and provides matrix identifiers.
Order by title from CANSIM.

— CANSIM: *Series Directory* (Annual, with periodic amendments) 1974 edition—Price $15.00, or $20.00 with amendment service.

The CANSIM *Series Directory* contains matrix and series titles and descriptive detail for series available from CANSIM. It is used in conjunction with the *Summary Reference Index* and CANSIM *Manual for Data Retrieval and Manipulation* (12-531) to order series from Statistics Canada.
Order by title from CANSIM.

This Review, the above and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, Ont., K1A 0T6 Canada, and remittances made payable to the Receiver General of Canada. For further information, direct inquiries to:

Canadian Statistical Review,
R. H. Coats Tower, 23 M,
Statistics Canada,
Ottawa, K1A 0T6.

**Amendments to catalogue numbers 12-530 and 12-531 will be issued periodically and will be available from the Publications Distribution, Statistics Canada.*
